Onyx Ads Marketplace (MyBB Plugin) — releasing soon

Simple self-serve ads for MyBB. Easy marketplace, wallet balance, and crypto top-ups. I'm looking for feedback before release.

What it is

A small ads marketplace at ads.php. Members can run banner ads on your forum.

How it works (simple)

Add credits: Members top up their wallet using Plisio (BTC/ETH/USDT).

Create ad: Pick a placement and term (day/week/month), upload image, add click URL.

Approval: Admin reviews. If approved, the ad goes live. If rejected, the wallet is refunded.

Note: You add credits with Plisio first. Ads are paid from the wallet balance (credits).

Slots & rotation Header: Shows 4 at once, rotates through up to 8 ads.

Sidebar: Shows 1 at once, rotates through up to 2 ads.

Moderation & notifications Admin can approve or reject ads.

If rejected, the plugin refunds the wallet automatically.

Integrated with my notifications plugin: users get alerts for approved, rejected, refunded, and a reminder before the plan ends.

Admin controls Set prices per day/week/month.

Choose allowed groups, upload size/MIME, and max active ads per user.

View orders and logs.

Compatibility: MyBB 1.8.x

Plisio: Used only to buy credits; ads spend the wallet balance.

Version at launch: 1.2.0

Looking for feedback

What else should be in v1.2.x? Reports you want, targeting options, or UI tweaks?

More Screenshots

Thanks for reading. Final build is almost ready — release is coming soon.
