AI Quote: There isn't a definitive number for how many top hit songs feature the LA-2A, but the iconic Teletronix LA-2A tube compressor has been widely used in the recording of numerous hits since the 1960s for its smooth, musical, and characterful sound, especially on vocals and bass, making it a staple for achieving a warm and present tone in the mix.

Why the LA-2A is so popular for hits:

Unique Sonic Character:

The LA-2A is an optical compressor, meaning it uses a light-sensitive resistor to control signal levels, which results in a very smooth, natural-sounding compression.

Ease of Use:

It has very few controls, with no adjustable attack or release times, making it incredibly simple to achieve a smooth, musical sound.

Vocal and Bass Applications:

Its smooth, slow compression is particularly well-suited for adding warmth and texture to vocals and for taming and enhancing bass lines.

Widespread Adoption:

Many renowned recording engineers have used it to achieve iconic sounds, including the vocals on

Alanis Morissette's Jagged Little Pill and Nirvana's Nevermind, as well as Shakira's vocals on "Hips Don't Lie".

Examples of songs and albums where the LA-2A was used:

Alanis Morissette - Jagged Little Pill : The LA-2A was used for Alanis Morissette's vocals.

Nirvana - Nevermind : Kurt Cobain's vocals were recorded using an LA-2A.

Shakira - "Hips Don't Lie": The LA-2A was used for Shakira's vocals on this hit.

The White Stripes - Icky Thump : The LA-2A was used by engineer Joe Chiccarelli to add distortion to Jack White's vocals on this album.
