Thread: [ENDURE \[MITM\] SOCK5 | HTTP\(s\) PROXY | ALL DEVICES | GOLANG | PYTHON | #COOKIE GRABBER](#)

Squixey - September 1, 2025, 2:54 am

GIVING ONE REVIEW COPY FOR €100 / Will setup everything for you!

The new era of Grabbing is here! ENDURE [MITM] PROXY is Coded in GoLang and Python. This is similar to server based MITM Reverse Proxy but with a different aspect, you'll be able to sell proxies or upload proxies on FREE PROXY SITES and will be able to Grab cookies of whoever uses your proxies.

I bring you Endure MITM (Man in the Middle) Sock5/HTTP(s) Proxy. The new era to Grab cookies is here! You just setup the proxy in Sock5 or HTTP(s) with any cheap server you purchase and it will capture cookies, device data, connection IP and everything, and store in a Database server of your choice as same as old Man in the Middle attack ways.

The Price for Full Source :- (GOLANG & PYTHON)

\$2220 - Standard (Python Version) (First copy for \$550) (Review Copy)

\$3300 - Full Premium (Python + GoLang Version) (First copy for \$999) (Review Copy)

What's Included in the Standard package?

Installation Tutorial and ReadMe Guiding the setup.

Full Support and Future Updates on the Python Version.

One Time setup of the Proxy Server + Database Server to Monitor so you understand how it works.

Able to access Cookies and other Info - Saved to Database (offline grabs).

What's Included in the Premium package?

Installation Tutorial and ReadMe Guiding the setup.

Full Support and Future Updates on the Python Version and GoLang Version.

One Time setup of the Proxy Server + Database Server to Monitor so you understand how it works.

Recording of Video while Setting up your service so you can keep a copy for future reference.

Client Support if you wish to sell this as a Service to any.

Able to access Cookies and other Info - Saved to Database (offline grabs)

In short how this MITM works in basic words:

You deploy a Proxy and sell it or upload it to any available free proxy site from where users use FREE PROXY (sock5 / http) and wait until your victim uses the Proxy. It grabs the users cookies who is using the Proxy and saves to the Database and also grabs URL and everything your target puts in and forwards to you. Its like running a cookie grabber inside a Proxy where you can monitor Realtime or Grab data saved into database being the MAN IN THE MIDDLE during the whole session.

How MITM PROXY WORKS

The visitor accesses the SOCK5/HTTP PROXY, and your CP is also connected to the PROXY server externally just like a session grabber or cookie grabber.

Whatever the user does such as logging into their FB account, or any account, the URL, timestamp, IP, Their Header Cookies and everything is saved inside DB.

Most people use free Sock5 or if you have high priority clients, you can sell them your SOCK5 and grab their cookies, it works how ever you wish to spread it.

Our version has two defines, one coded in Python which has only Database Saves and the secondary and a bit Premium version for faster caching speed coded in GoLang, which has real time cookie grabbing and other features both works the same as proxy hosted on SOCK5 or HTTP, but the Premium has abit more features.

The Next Generation of Grabbing

This is the next GEN of grabbing cookies, using this method no-one will ever doubt that their cookies are being scraped by someone else.

No Spreading Required / Minimum Work

You can either Sell your proxies to high priority clients, or directly spread them by uploading them to Free Proxy Websites, and you'll start getting Hundreds if not thousands of cookie grabs every day.

Requirements to run SQUIXEY MITM source code:

Ubuntu server with HTTP and HTTPS port open + A server to host DB and CP

Ubuntu Server with Sock5 /TCP port open + A server to host DB and CP

Terms of Service

By using ENDURE MITM SOCK5 PROXY, you agree to use the source code ethically and responsibly.

We do not condone illegal activities. Any misuse of the source code is solely the user's responsibility.

Sales are totally anonymous, no logs or data is saved in any case anywhere.

We do not target or endorse any other sources, but, ours only, this source is completely made in by us.

All sales are final, and what you do with the source code after the purchase is completely up to you. We don't have any hand to monitor or accept anything endorsed by you using the source you have purchased from us.

Why does it look like u are trying to resell my source codes with little bit of lies and overprice :D ?

I can see a lot of lies out here which can totally demask u that u have no idea what u talk about. First of all Cloudflare or any other SSL provider will not protect u from red, yellow pages. Then hidden actions can't be done totally in silent like u advertise, best u can do is rewrite code of OTP window so it looks like its for other reason. Then u advertise your source code as just u put any domain.com and it works smooth capturing cookies and etc, that is totally lie and impossible to code since every website require diff methods and diff approaches.

+ There is a lot of sentences which is totally copied from my thread xd

And i can go on and on, there is a lot of lies that OP tell ! And most information he write is from my comments or threads.

This is not your source code, and no lies are being made. This is a totally different project coded just yesterday, this is a Sock5 proxy server where your victims connect and you grab their cookies. Your source makes a reverse proxy and you grab cookies from when a victim visits your false domain of your client.

Try to read the thread! ?

Squixey - September 4, 2025, 12:45 am

Here added the CP where the cookies will be stored when a user connects to the Sock5/HTTP Proxy.

Offline cookies are also stored in DB for future use.
