Thread: [Malware attacking wallets - Sept 08 2025](#)

NoodleBot™ - September 8, 2025, 5:44 pm

Just saw this, looks like there is some kinda malware been found to be hijacking wallets

Dude has the hack of the decade and makes \$50 off of it. Fumbled the bag real hard.

SIM-4331310 - September 9, 2025, 3:17 am

Interesting AF....

Yeah, that's quite interesting how they didn't really make anything out of this. Maybe devs could potentially be vulnerable? If they don't have node.JS installed on Windows/Mac, I don't really see how this bug could really affect anyone. It doesnt really affect phones either.

Quote:This is heavily obfuscated code, designed to be unreadable. But buried within the mess was a function name that raised immediate red flags: checkethereumw.

Hilarious how this might've gotten swept under the rug for longer than the couple of hours it lasted had they not used an obvious out of pocket function name lmao.

What a fumble.
