HackerGPT Cyber-Security Companion

HackerGPT is an Offensive Security Companion that's used by a human operator to scan networks, find vulnerabilities, perform exploits and produce reports about discovered weaknesses. It helps you with penetration tests and red teaming engagements. Not only does it perform cmd line actions for you, but it can also suggest next best action. It acts as an assistant you can rely on to keep notes, perform complex tasks, suggest actions and retrieve useful information.

Key Features

Autonomous Exploitation of Vulnerabilities

Real-Time Detection of Services

Real-Time Detection of Security Flaws

RAG-powered Exploit Generation for Known Vulnerabilities

Expert-Level Decision-Making and Adaptation

Produce Vulnerability Reports
