Pyrite - September 27, 2025, 6:03 pm

CINNABAR LOADER

BOT:Coded fully in C++ with no dependencies AT ALL.

Stub size of 333kb.

Persist via registry keys if the process doesnt have admin permissions or through the task scheduler via the COM api, stealthier than other software using schtasks.exe directly.

Available Commands:Download and execute - Download any executable file onto the user's computer.

Download and execute memory - Uses RunPE to execute a NATIVE .exe without dropping.

Ask Elevation - Pops up an UAC windows for cmd.exe to execute your file.

Execute CMD - Executes a cmdline script.

Execute Powershell - Executes a powershell oneliner.

Update - Replaces the installed .exe with another from a URL.

Uninstall - Removes the installed .exe and the persistence configuration.

SERVER:Server made in PHP.

Capable of holding as many bots as you want.

Clean and intuitive UI.

Easy to manage.

TOS:I am not responsible in any way on the use you give this software.

Sales are final, no refunds.

FAQ:

Q: Where does the stub binary work?

A: It works on any WINDOWS 10/11 machine.

Q: Is this FUD?

A: NO, this is a loader, not a crypter. Also, even if it was, you should always crypt the raw payload.
Detections on [kleenscan](#).

Q: What payment options do you have?

A: I accept LTC almost exclusively but i can accept other currencies if requested. Payment is always made in crypto, i will not accept bank transferences, paypal, cashapp or anything similar.

Q: How can i contact you for other questions?

A: You can PM me here, on HF, or hit me up on my telegram account [@pyriteuser](#).

Vouch Copies: 3/3. I only accept these to reputable members of the forum.

My Honest Review About Product

[1] Deal :
As per my vouch contract created on September 28th, 2025, i received the product on same day.
Deal was super smooth as silk.
Seller is quite friendly to talk.

=====

[2] Application registration process :
After purchase, seller should provide a builder & PHP WebPanel to the buyer.
Buyer then need to setup webpanel on webhost of his/her choice & using builder to generate stub is quite self explanatory.

=====

[3] Application :

After i received the product, i have extensively tested the product for 2 hours.

Let's divide this topic in 2 small sub-parts;

[A] WebPanel GUI :-

It's super simple but looks quite nice. Images are already provided by the seller above in thread.

[b] Working of the application :-

After generating a STUB, you just need to execute STUB onto the system of your choice & it should connect to the WebPanel immediately.

=====

[4] Final Conclusion :

Is this product for you or no?

At the moment, it works as promised, so yes, if you are the one looking for a good loader then this one is definitely for you.

Will i recommend the product to others?

Yes, definitely. For its price, its one of the awesome product released on HF. I hope, developer will keep updating the product in future.

Hope that will helpful to someone who is interested in buying it.

Thanks & Cheers,
Comrade.

This looks really good. It's funny, I've recently been planning on getting another botnet project started again and I see this. I like how it's presented and fair pricing for it. I've got everything ready man, are you still giving out vouch copies? I may just be l33t here but I've been in this scene for a while, mostly just lurking lately.

Good luck with sales regardless, hit me up if you'd like me to review a vouch copy for this. I'd like to leave you a detailed review for this after testing it.

Looking forward to it!

Thanks for your words! I would like to give you a vouch but i only give them to people with ranks or popularity. Also, i have some people willing to test it so it has to be a no this time. But again, thanks.

CompulsivePurchaser - September 30, 2025, 9:31 am

Bought this and totally recommend it, simple and very fast to setup. For this price you get your own builder you can spam builds and keep your bots safe in different places or use a specific build for a specific campaign. It is totally self-hosted no middle-man or strong control by the coder, meaning you will always know that no third party might be able to access your sensitive information or PCs that you want to manage with this tool.

Runtime and Scantime results without encryption, with internet and a download and execute Putty task on first connection pretty clean results.

Looking forward for more tools from this user, really active when it comes to answering questions or helping out. 10/10

WHen you buy the program i give you the PHP panel, which has the source code for the C2 and the stub builder, which does not have the source code of the bot.

What do you mean by "offer a package"? When you buy this, it comes with everything you need. If im not understanding correctly your request, explain it to me. Thanks.

Can it disable the AV on the user system so that the loader does not get detected for a longer period of time?

Cinnabar cant do that although you can do it through the Execute PowerShell task with a manually crafted script. The next loader im making will be able to silently add exclusions to windows defender, thought the bot for this new loader is not finished yet.

Its a completely new product, and a much better and stable one.

kopfnuss22 - October 21, 2025, 12:54 pm

Will there be any updates for this loader, or should I wait for your next, better loader? And how long will it take, approximately?

I think you should wait for it. It will take like a month or two. But this decision is up to you.

Also, my new loader will be more feature extensive. If you want a simple loader buy this, if you prefer more features wait a bit.
