Thread: RP2040 Custom BadUSB Payloads

DieterName - *September 27, 2025, 11:42 pm*

I’m building custom payloads for RP2040 boards (Pico/Pico W & more). Send me your Duckyscript or similar and I'll convert it to source and build the UF2 file for you. Way faster boot times than any Python alternative these are compiled in C. $5 per build, custom device name & manufacturer spoofing included. DM me if you're interested.

(Willing to build test payloads for free to prove it works)
