telegram OSINT & Security Testing Bot

Hello,

this is a Telegram bot I made for myself to do OSINT and security testing, but maybe others will find it useful too.

I was tired of using many different tools for basic security work, so I made one bot that includes all the commands I use every day. It's not perfect, but it works well.

command List

? Network Commands
sipinfo - Get information about an IP address (location, ISP, etc)

ping - Check if a host is online and response time

portscan - Scan a single port

portrange - Scan multiple ports at once

dnsenum - Get DNS records from a domain

udpscan - Scan UDP ports (slower)

? Web Security Commands
webscan - Scan website for vulnerabilities (SQLi, XSS, LFI, etc)

bruteforce - Try logging in with common passwords

serverinfo - Detect web server and technologies

emailharvest - Find email addresses from a site

wafcheck - Detect if a site has a firewall

sslcheck - Get SSL certificate details

headers - Check security headers

cmscheck - Detect CMS (WordPress, Drupal, etc)

adminpanel - Search for admin login pages

backups - Look for exposed backup files

apifind - Discover API endpoints

wpscan - Scan WordPress sites

gitcheck - Detect exposed .git repos

configs - Find exposed config files

payload - Generate payloads for testing

? OSINT Commandssubdomains - Find subdomains of a domain

phoneinfo - Get info about a phone number

usersearch - Search social media by username

dorks - Generate Google dorks

exif - Extract metadata from images

linkcheck - Analyze suspicious URLs

whois - Domain registration info

dnsrecon - Deep DNS recon

takeover - Check for subdomain takeover

cloudassets - Search for cloud resources

? Dark Web / Crypto Commandstorcheck - Check if an IP is a Tor exit node

cryptogen - Generate crypto addresses

emailheaders - Analyze email headers

hashcrack - Crack hashes with wordlists

cve - Search CVE vulnerability database

shodan - Search Shodan (API key required)

monitor - Monitor domain changes

? Utility Commandspassgen - Generate random passwords

wordlist - Create wordlists for bruteforce

base64 - Encode/Decode Base64

urlencode - Encode/Decode URL strings

hex - Encode/Decode hex

hash - Generate MD5, SHA1, SHA256 hashes

youtube - Search YouTube

google - Search Google

crypto - Check crypto prices

uuid - Generate random UUIDs

? Admin-Only Commands
clear - Delete chat messages

antispam - Enable/Disable spam protection

ban - Ban user from bot

unban - Unban user

startgame - Start game

stopgame - Stop game

? add Questions & Answers for Game
Open the file `questions.txt` and add entries like:

Code 4+4:8

question:answer

etc:etc

how to Install

What you need:Node.js installed on PC/VPS

npm (Node package manager)

Installation:

Code git clone <https://github.com/Patchloop/ObuscatedBOT.git>

cd ObfuscatedBOT

Install packages:

Code npm install dotenv node-telegram-bot-api axios cheerio uuid qs util dns net crypto fs yt-search bitcoinjs-lib ecpair tiny-secp256k1 ethers mailparser node-exiftool dist-exiftool whois-json

google-libphonenumber

Set up bot: Get your Telegram bot token from @BotFather

Create a file named .env in the root folder:

Code TELEGRAM_TOKEN=your_token_here

Or edit index.js directly:

Code const token = process.env.TELEGRAM_TOKEN || 'your_token_here';

Set bot admins:

Find this line:

Code const admins = ['admin1', 'admin2']; Change to your Telegram usernames.

Run the bot:

Code node index.js

some notes: some commands require API keys (e.g., Shodan)

bot works better on Linux

if a command fails, make sure all packages are installed

for help, comment in thread or DM me

a disclaimer:

this tool is for educational and legal security testing only.

use it only on systems you own or have permission to test.

I am not responsible for any illegal use.

Stanley - October 6, 2025, 3:15 am

I'm Stanley HF's helper bot. The OP (original poster) of this thread wants everyone to see this page and has elected to bump it to the top of the showthread listing. Since HF doesn't want a ton of LQP (Low Quality Posts) this is the best method of bumping your content. There is a small ?yte fee for each bump. Any OP can bump any of their threads on HF from the linked icon on the top of their first post.

If you haven't already read the first post of this thread we encourage you to do so.

Thanks,
Stanley
