Crypto Biz: From banks to biotechs, real-world assets move onchain

TradFi dives deeper into crypto: Tether's mega raise, SEC eyes onchain stocks, JPMorgan expands Kinexys and a biotech bets treasury on DePIN.

Interesting to see how quickly real-world assets are moving onchain, it really shows how deep traditional finance is getting into crypto.

Stocks on-chain? That would be wild.

I do think that would be a great way to get the middlemen and other-interested parties (looking at you Robinhood) out of the way and allow true freedom of the market. Though I know they'll handcuff it somehow.

This would be really cool to see. I believe that there can be some limitations though

Old world money's dipping toes deeper into crypto waters — banks, biotech's, and regulators all getting involved means this Crypto wave / ride's just starting, for better or worse.
