Bitcoin rallies with DeFi as Zcash tops weekly performance: Finance Redefined

Analysts were eying a “quick” Bitcoin breakout to \$150,000, as ARK Invest’s Cathie Wood compared the Hyperliquid token’s performance to Solana during the previous crypto cycle.

Exciting momentum across the board. If Bitcoin really pushes toward \$150K, the whole DeFi market could see another big wave of growth.

Such an insane price. I always thought \$100k would be the new floor, but already hitting \$150k can mean a few things, but I lean more towards how worthless USD really is.

Crypto’s still playing rollercoaster—Cathie Wood’s hype train to \$150K is full steam ahead, but remember, crypto’s less “quick breakout” and more “hold on for dear life.” ???

[Omniscient](#) put me on to Zcash, but I am trying to figure out if I should buy in or not. It has pumped very quickly, and I usually try not to buy in for those moments. However, it's crypto... Pump pump pump for a three-peat is not uncommon.
