Can it solve interactive captchas?

whoispatch - October 7, 2025, 7:30 am

(Oct 7, 2025 07:11 AM)gianfran12 Wrote: [\[CITE\]](#) Can it solve interactive captchas?

Hello. The answer is yes.

The library/code I offer can bypass most modern WAF/CDNs such as Cloudflare/AWS/Akamai + other JavaScript Captchas.

The good thing? You can integrate it into any application as it comes with absolutely all the source code, no license or subscription is required and it's a reliable solution. And you can integrate it into any tool.

Perfect for scraping, account creation and other things.

I offer it in two languages: Python and Node.js. (v1 / v2)

The library/code comes in two versions so it can be easily included in any tool or website. It is uncompiled and with clean source code.

Most people on the forum would probably recover their investment in this script very quickly. It also has an ROI.

Since it can be used to create accounts (accounts can be sold if they become older), you can scrape emails/marketplaces + other preferences of yours.

Hello,

PS: It comes with the entire source/library, clean code, no compilations, no subscription, and no other crap.

I've upgraded the library aand the bypass rate is pretty good. It easily bypasses Cloudflare Turnstile, AWS, VShield, Akamai, and other JavaScript challenges.

It's a library that you can add to anything, whether it's a scraper/a bot that retrieves certain information from a website...or an account creator. You can use it in ANYTHING that REQUIRES CAPTCHA, without anything extra like 2captcha services or other external services.

4chan.org/b/ - October 13, 2025, 8:28 pm

Interested, sent you a DM.

Sure, I sent you a reply with more information.

I still have Captcha Scripts for sale for those interested.

hi bro ,how much

ablationvector - November 27, 2025, 8:50 am

UPDATED HONEST REVIEW.

I first purchased the tool OP made with some specific use cases in mind, and I was really frustrated in the beginning because it seemed like the tool did not work whatsoever, but after much assistance from OP, i can see that this tool is in fact perfectly capable of imitating an authentic user and grabbing the authentication token from the captcha before proceeding with anything else.

KEEP IN MIND - what OP is selling is a library of files that you must use and implement for your own uses, if you do not have much experience with basic linux/using a terminal, this will most likely be too hard for you to use. Have realistic expectations.

This tool is perfect for someone looking to somehow bypass and get through captcha to mass create accounts, post comments, etc, and it DOES work on near all cloudflare captcha services so far. it just so happens that some few specific use cases (which im sure many people are expecting when they first think of "captcha bypass"), this tool CAN bypass captcha and at a decent rate too, but just not at the extreme rates that i and other more malicious people would expect.

whoispatch - November 29, 2025, 7:55 am

Thanks for the review, I appreciate it.

1. I'll be back with some updates. I've seen interest in Layer7 and am working on a version that will be 100% functional on Layer7.

It will come with:

- A browser emulator that automatically detects WAFs, status codes, etc., with rate limiting and session management so that it doesn't consume as many resources, using the same session.
- Proxy Support (management)
- Dependencies will be functional on any type of Linux system.
- I provide 100% source code, I do not obfuscate/encrypt anything, not even the bypass functions.

Initially, the script was designed for scraping, account creation as an efficient alternative to 2captcha. But I will optimize it to do as much as possible, I will rewrite the entire bypass function today.

whoispatch - December 11, 2025, 9:13 am

Still for sale! [warn]
