Building the Internet Above the Clouds

The problem with centralized internet infrastructure goes beyond just service disruptions or high costs.

Vectura - October 6, 2025, 12:34 pm

Interesting read. Building internet infrastructure above the clouds could solve a lot of centralization issues while making connectivity more resilient and accessible.

Aeowulf - October 6, 2025, 2:39 pm

It was one of the beautiful things about the internet, but its become centralized.

B3A - October 6, 2025, 11:13 pm

Using satellites for a fre open internet sounds powerful for places with weak or censored connections. But if one company controls the system it could end up being the same problem again

DAL-SHA - October 7, 2025, 12:51 am

Makes sense—centralized internet is weak to failures and expensive. Building above clouds could bring better, cheaper access for many people.??

Fish - October 7, 2025, 1:45 am

Everything now is being built in the cloud. Would be cool to see how this turns out

Ieste - October 7, 2025, 1:47 pm

Centralized internet is a single point of failure. Maybe it's time to go sky-high.

Definitely is... Also GPS & satellites in general.

It's a huge reason I am invested in quantum GPS. The world is not ready for an extended outage where we lose GPS and comms
