Thread: [REVERSE SHELL METHODS | question](#)

**m3k0h** - October 6, 2025, 1:39 pm

Are there any new methods for creating a reverse shell? Because obviously everything posted on YouTube or well-known blogs has already been seen, and anything can detect it. Honestly, I don't know where to look or where to turn. Any clues to guide me?

?

I sent you both a link, but I recommend the following for anything lower level..

Geoff Chappell & undocumented win API functions, and Zw vs Nt are interesting

Halos/taurus/similar gate methods - Rings

Syscalls

Walking the peb

Runtime Ntdll mapping

Base address identifying

tmp file on disk, create process, suspend process, resume process

DLL load priority

If you research these topics, you will understand a lot more about cybersecurity & defense
