A Breakdown of the Fiscal Impact of Three UBI Scenarios in Brazil

The fiscal analysis shows that replacing existing benefits could offset 25-35% of the UBI's gross cost, making the reform financially viable.

Really interesting breakdown — Brazil's approach to UBI could become a model for emerging economies if they manage that 25–35% offset effectively. Reallocating existing benefits instead of just adding new spending might be the key to making UBI fiscally sustainable, especially in economies with tight budgets.

Yes, let another country testbed this. Not the US.

Haven't those that tried it failed already?
