Thread: [Encrypted messaging application](#)

Anakin9154 - October 8, 2025, 12:09 pm

Hi, i was wondering if someone could suggest me a good messaging application that is really secure in terms of privacy. I know WhatsApp has a good end to end encryption but is known for having backdoors and lots of metadata that can potentially violate the privacy. Telegram as far as i know, now is quite the same as WhatsApp.. Signal is good enough I think but they thread to leave EU if the chat control law will pass. It's just a curoisity but anyone knows some private messaging app or way to communicate with other that is not short range like bitchat?

PhillyStyle - October 8, 2025, 12:30 pm

I have never used it because I don't have a need, but there is keybase. It sounds pretty legit I think.

- SESSION
- SimpleX
- TOX
- Signal
- Ricochet
- XMPP
- Keybase

WhatsApp has had vulns, but apps with smaller userbases are less likely to be targeted. Telegram is not good for privacy. One new secure messaging app that I was told about recently is Ameeba. Don't know how good it is.

Thanks, seems legit and good!

Thanks, will try it. Just a curiosity.. you said you don't need messaging app, so how do you communicate with others?

I don't really have any friends with the same interests as me I suppose. I still use other messaging apps like Facebook messenger to talk to friends and family.
