Learn How Leading Security Teams Blend AI + Human Workflows (Free Webinar)

AI is changing automation—but not always for the better. That's why we're hosting a new webinar, "Workflow Clarity: Where AI Fits in Modern Automation," with Thomas Kinsella, Co-founder & Chief Customer Officer at Tines, to explore how leading teams are cutting through the hype and building workflows that actually deliver. The rise of AI has changed how organizations think about automation.

Sounds like a great session. Really interested to hear how teams are balancing AI automation with human decision-making in real-world SOC workflows.

**Aeowulf** - October 10, 2025, 9:13 am

As someone who's worked in a SOC, and been an automation developer, merging the two are hard to do without letting stuff slip through the cracks.

**JoshAllen** - October 10, 2025, 9:24 am

This is an important middle ground conversation.

Too many people on one side that think AI shouldn't be around at all, and others that think it will take full control of everything.

**plops** - October 10, 2025, 11:27 am

Would be an interesting session to join. Automation is the way to go, to extent

**RangoWorld** - October 11, 2025, 4:49 am

I think AI at the end of the day should be used as a tool and should never replace the human executive decision making.

This is how I have always viewed it and shocked people see it as more, and even want it as more of a replacement.

**Ieste** - October 30, 2025, 5:36 pm

You need to build workflows that actually deliver.

**B3A** - October 31, 2025, 1:19 am

Shows how using just AI or just people isn't enough anymore.

The best teams are mixing human judgement + traditional rules + AI tools.
