taawy - December 10, 2025, 6:56 am

I'd definitely like to try the free crypt. I've been long interested in having some proof of concept before I chuck my limited funds to a dev who is considerably beyond my abilities able to mislead / conduct business in bad faith and I lack the real ability to contest that with credibility. Instead credibility is outright offered, no fear of having to contest laer.... Personally, excellent business strat man/.

Hope to hear from you

? MAJOR UPDATE: Stealth & Security Upgraded ?

I just dropped two powerful new features that take your payloads to the next level:

? Decoy Mode

Run any legitimate executable - notepad, adobe, or any trusted app - while your payload executes silently in the background.

? User sees normal activity

? You get full control

? Zero suspicion

? EXE Hardening - Multi Encryption

Your payload is now wrapped with an extra layer of advanced encryption.

? Harder to detect and remove by AV

? Harder to stop
