Pepeto Surges Past \$6.9M—Outpacing Ozak AI, BlockchainFX, and BlockDAG as 2025's

As Ozak AI builds AI utilities, BlockchainFX launches its \$7M super app, and BlockDAG nears \$410M raised, Pepeto (PEPETO) races ahead with \$6.9M+ raised, 222% APY staking, and a live demo exchange at just \$0.000000158. Combining meme culture with real products, Pepeto offers unmatched asymmetry and remains the top crypto presale to watch in 2025.

yeah, it's weird how much attention certain projects get over others which are more useful.

It's interesting, there's a reddit scam report here from 2mos ago:

https://www.reddit.com/r/CoinBase/comments/1mjwa6i/pepeto_meme_coin/

I bet some of those users are happier now than they were then, but it just goes to show you that unknown tokens can still blow up online... just months ago people didn't know much about it, and now it's listed.

Being in presale and offering 222% APY is very appealing.
