Thread: [If the internet requires ID in the future what will you do ?](#)

Chorozon - October 13, 2025, 12:38 am

Have seen alot of buzz online about online IDs being rolled out and plans of them being rolled out in the future , some European and Asian countries have all ready experienced things like this but what will be the response of everyone else ?

Will you be sending your ID in to validate your age on discord so you can talk to your discord kitten ?

Do you have a plan to work around it if it hits your country ?

Will VPNs become obsolete in the future with everyone needing to validate some kind of ID to even connect to the internet ?

Let me know your thoughts and philosophy's on this new age of internet which is seemingly becoming less free

Deany - October 13, 2025, 12:59 am

They already are like fb now is starting to do it with new accounts

Oh_Well - October 13, 2025, 1:06 am

I'll always try to find alternatives.. I can't see myself adding my ID just to access the web

Jamika - October 13, 2025, 1:08 am

Will use mine in safe ones , fake id for unsafe side lol

Bastille - October 13, 2025, 1:18 am

I'll probably leave social medias. To be honest I don't use them that much, nothing under my real identity, I'm using them only to rot my brain with doom scrolling. It would be a good thing for my brain.

Regarding Discord I have everything I need on forums, not fond of Discords. I could use IRC to Chat.

And for the Internet, I would find an alternative, not that hard to hack a wifi ... But I'll never give my ID for this.

It's been a month or two in France that you have to provide your ID to access p*rn websites, but you can easily bypass it with a VPN. Crazy to provide an ID card for this.

Lowkey - October 13, 2025, 1:48 am

Leave the internet?

Like is this even a question?

Pimping - October 13, 2025, 1:51 am

Yeah its already happening now with social media sites

if i ever need ID for accessing the whole internet... i will stop using it or find another way to access. already thinking of getting multiple hard drives and backing up all the media and stuff i find

interesting to prep if this happens

The Pact - October 13, 2025, 2:56 am

(Oct 13, 2025 01:48 AM)Lowkey Wrote: [\[CITE\]](#) Leave the internet?

Like is this even a question?

No one here is leaving the internet. We all float down here.

Charlie Sheen - October 13, 2025, 3:02 am

I'll do everything I can to avoid having to use my ID on the internet. If it comes down to it then I'll just use the internet drastically less.

RangoWorld - October 13, 2025, 3:27 am

I will for some sites if I don't have a choice. Otherwise I believe there will be resistance platforms even after a crackdown.

Fish - October 13, 2025, 5:26 am

I feel like I'd use it a lot less or find ways around it

aj33b9009 - October 13, 2025, 12:11 pm

I can't share my ID online.

onlineuser | D3RFER - October 13, 2025, 12:24 pm

I'm sure there will be ways to avoid it or ways to use a fake ID.

Either way, I would never, as in never, do it.

Prepper - October 13, 2025, 12:26 pm

ID on the websites I use if need be because I have nothing to hide and choose to have an online digital footprint already.

HerrWinston - October 13, 2025, 12:59 pm

No way I would ever enter my ID to access the internet, there will always be alternatives that I will try to use and if thats not possible at all, then there shall be no internet for me, sorry guys ;(

HaydenTK8 - October 13, 2025, 2:00 pm

It's going to be a nightmare, database leaks: Identity theft,blackmail or use convoluted methods to access the internet YAY

plops - October 13, 2025, 2:36 pm

All I know is if it does become real and impassable, I hope we all get a clean slate.

Like "alright, starting January 1st you are requirednto sign into the internet with your id. Nothing in the pas tcan be linked. But January 1st on will be."

I wouldn't like it. But id be more compliant.

Chorozon - October 13, 2025, 3:36 pm

The third party company that was doing the discord ID verification already been hacked and 70k + IDs have been stolen which is awkward

(Oct 13, 2025 01:06 AM)Oh_Well Wrote: [\[CITE\]](#) I'll always try to find alternatives.. I can't see myself adding my ID just to access the webDo you think peoples will adopt things like Tor rather than the clearweb ?

What will your work around be if you need a ID for the clearweb ?

Kify - October 13, 2025, 7:42 pm

(Oct 13, 2025 03:36 PM)Chorozon Wrote: [\[CITE\]](#) The third party company that was doing the discord ID verification already been hacked and 70k + IDs have been stolen which is awkward

It wasn't the company that did ID verifications, it was Zendesk, which is a platform they use for ticket support. Someone got access to all the tickets and it seems like a huge amount of users did manual ID verifications through support tickets. They use k-ID for the automatic ID verifications, which was not hacked.

(Oct 13, 2025 03:36 PM)Chorozon Wrote: [\[CITE\]](#) Do you think peoples will adopt things like Tor rather then the clearweb ?

Fuck no, it looks way too complicated/shady (and more importantly, slow) for the average user. There will just be clearnet alternatives hosted in countries that won't enforce these bullshit policies.

(Oct 13, 2025 12:38 AM)Chorozon Wrote: [\[CITE\]](#) Will VPNs become obsolete in the future with everyone needing to validate some kind of ID to even connect to the internet ?

Technically enforceable to an extent but it'd be a cat-and-mouse game which the VPN companies would be happy to play considering the amount of money that'd be involved in such hypothetical situations. They'd have 90% of internet users as customers lol.

I personally like to believe that even if all of this would happen, people smarter than me would come up with solutions, people whose rooms look like this:

And heck, even if they get raided because of their work, there'll always be a Nikolai somewhere in Eastern Europe happy to take the risk haha

Joel - October 14, 2025, 12:06 am

I would use Fake-IDs only, I already am being forced to provide my ID to use Grindr and I absolutely refuse, and what's even more annoying is my photos saved on there are completely inaccessible until I link my ID to them, kinda sussy ngl. Gay people are already targets for certain groups, having my government id linked to my sexual orientation seems insane, especially if a leak was to happen further down the line.

Chorozon - October 14, 2025, 6:21 pm

Ahhh thank you for the correction and clarification , i would never of thought that many people would of done ID verification's through ticket systems

I agree the average user is not going to jump at TOR but it would solve alot of issues

Yes i have been in similar countries that have the same cat and mouse game , the ISPs could crack down more heavily on users and implement a rougher KYC but i guess it could be redundant

Your last statement was a work of art and more people should post like you , you are a credit to this forum sir , that photo hits at the the heart of me xaxaxax

God bless eastern Europe

Palestine - October 14, 2025, 6:29 pm

The whole thing about the internet is anonymity and atleast in the US I think (or hope) that trying to do anything like that would infringe on our rights of free speech. Besides I can see people finding work arounds for it possibly by using fake or stolen IDs

plops - October 14, 2025, 6:40 pm

I think this is too optimistic and gives off a Jesus complex.

The internet is a different game. There are sites that have been pushed so far to the edge of survival that they have to find or buy a TLD. Even then that does not guarantee anything. It gets messy/expensive trying to host your own server to point your domain now.

My point is there is a larger hand on the clear net. Maybe TOR and patience comes together. Even the TOR updates are upsetting.

Maybe you build the way? Maybe me? Maybe some guy in a basement? Maybe some kid messing around with iot. Maybe some lucky retard. Maybe someone who is not born yet.

I can understand that but I think the dark web will become the new norm for most people who just want to keep that anonymity

JoshAllen - October 14, 2025, 6:49 pm

I don't personally see the future in it.

Too much of a security issue and people will find a way around it anyways.

plops - October 14, 2025, 7:05 pm

The 'dark web' will be on the same train then just a later car. It will get to the point where hosting onion sites are like a leaks in a hose. Plug enough holes and you find something.

At this point though is it really hard for ai to not find the source? The dark web thing has always been funny to me.

Eran - October 15, 2025, 9:43 am

I'd use it to chat and that's it. Would be a blessing in disguise tbh, I don't like the internet recently.

I think its less clean cut then people are making it out to be and more about broader data harvesting

Although If the governments where trying to use it to track people better though it would help them

that your early years of the newer generations would of had to have a Online ID to start with even if they start using work arounds when they are older

Palestine - October 16, 2025, 2:47 am

I would have to disagree the DW has come far its just more underground

DAL-SHA - October 16, 2025, 4:50 am

this reflects a growing push for accountability, safety, and control but it also threatens anonymity and digital freedom. Many will resist, seeking workarounds like decentralized platforms or privacy tech. If ID verification becomes mandatory for basic access, VPNs may not be enough.

Palestine - October 16, 2025, 8:34 am

(Oct 16, 2025 03:04 AM)Chorozon Wrote: [\[CITE\]](#) I would have to disagree the DW has come far its just more underground

I honestly haven't used the DW in years so I can't even speak on that. I just remember how it was back then and it was great lol

sharn - October 19, 2025, 10:33 am

I would try to keep personal info minimal online.

Only the safest ones would get my information.

Chorozon - October 20, 2025, 9:35 pm

Honestly, I wouldn't rush to hand over my ID unless it's required. It might make things safer, but the privacy risk is huge. If this becomes global, VPNs might lose value, and people will probably move toward more private, decentralized platforms.

bot1044net - *October 21, 2025, 2:19 am*

i would just use my id, i dont have anything to hide. and then just avoid those other websites
