Thread: [Stock market predictions for this week \(Oct 13+\) ?](#)

Hackers - October 13, 2025, 6:01 am

Does anyone have any stock tips for this week?

IONQ announced a new method to simulate chemical systems, in an effort to slow the effects of climate change. I understand some people don't know what this means, but I am bullish on anything for this effort. Climate will end up justifying a lot of changes that are necessary, so I am always on the lookout for these types of efforts. They have new partnerships, and new investments coming in :)

I do expect to see IONQ pump up a bit.

I expect some corrections in the stock market because things are very high. However, I am bullish long-term on a few key technologies such as quantum, LiDAR, semi/super conductors, military defense, AI, and energy tech.

EDIT:

IONQ up at almost 10% for the day on open, alongside other really solid gains in the quantum markets.

My portfolio winners for today's open are quantum, LiDAR, and battery tech related stock taking top spot at 17%+ open.

Long term i am going 100x+ on these. I am not selling anytime soon. The world is about to be revolutionized in many areas of technology, energy, transport, and more. This is just the start :)

Crippy - October 13, 2025, 9:34 pm

I've just entered more positions into BBAI and KTOS. Currently Im open to anything tech related and will probably dump more this or next week.

Agree with you as the break thrus are now happening.

Lots of exciting things happening. Nice pick on BBAI & I'll take a look at KTOS for a better entry point.

To me, it looks like \$5-8 on BBAI makes sense for a buy possibly, and on KTOS I'd love to buy in at \$40-60.

Looking at BBAI, I may be able to time a bounce but it had too strong of a day yesterday, and I don't time the market... Maybe I'll just buy some this morning.

Yesterday was *glorious*. 15% return on my entire portfolio overall for the day, with some clear winners.

RGTI 25% at \$55, QBTS 23% at \$40.62, IONQ 16% to \$82, and QUBT almost 13% to \$21.46

Lots of new all time highs

For non-quantum, I saw some gains 4-8% in LiDAR, up to 13% on battery tech, and a few 1-4%. I had four stocks at -2% to -0.25% but they don't make up a big portion of my portfolio.

Looks like my move of the week so far was dumping \$400 of CMRC (Bigcommerce) and putting it into quantum.

I had been looking to get rid of my BC after it didn't move with their rebrand.
