Thread: [XMR/Monero TA - Drop to \\$250 to \\$280 versus \\$300+ support](#)

**Hackers** - October 15, 2025, 8:30 am

Here's my mockup for TA on XMR, looking at a solid buy range of \$250-280 based on a few previous trends. I am bullish overall, and personally I think XMR still has its place. It is widely popular in a number of areas & markets.

It's sitting pretty at \$320 right now, and I'm not saying we should expect \$250 tomorrow... but you can clearly see that there is room for a re-test at lower numbers, while still maintaining a bullish prediction / trend.

For those of you who can read charts & prefer a clean slate...

A more bullish prediction would be to say that \$300-320 is a good buy if more short-term trends continue

Maybe a more realistic plan would be to say:

- > buy some at \$280-300 if it drops a bit
- > save some cash for \$250-280 buys

DISCLAIMER: I'm not buying XMR today, I lost a bunch in a catastrophic server/machine failure and it's too recent for me to buy in at these numbers, just based on that.

Obviously best case scenario for many would be to see XMR tank back to \$100 but that's very unlikely, although not impossible.

I would personally buy a bunch at \$100, but yeah, definitely not banking on that ...

I'm bullish on XMR too. After seeing ZEC rise I can't help it's because of Zk-snarks.

But the more I look at how ZEC compares to XMR, I tend to lean towards ZEC in the privacy market.

You can literally swap internally your wallet between t and z addresses. That means no need for 3rd parties.

And ZEC has t address support in exchanges. Kind of the best of both worlds.

Now back to XMR. I started to hold my XMR income lately instead of swapping it. I'm hoping for a breakout as well. I don't think it's unreasonable that we see \$400 in 6 months if the overall market breaks out.

btw, your edit TA chart looks like madness.

I haven't really researched ZEC yet & don't own any. I'll take a look for sure & compare features.

XMR I really didn't mean to buy originally, but stumbled into it taking a payment & found a lot of people using it. It worked well, I liked the available software, tools, etc. Losing it kind of sucks though, it's up a good amount since then.

I'll keep an eye on it but wish I had found ZEC haha!

The chart... Heh, it's kind of a reference to something / inside joke w/ some users.

Also, I did test GPT this morning to see if it could make TA charts & it was pretty bad:

If you need an online graphic tool that's decent...

<https://www.photopea.com/>

Also check out my April Zcash thread when it was \$34.

<https://hackforums.net/showthread.php?tid=6296847>

Basically it did a 700% increase since then.

Nice, that's awesome , I'll keep a closer look on your threads here :)

I use Krita usually ( <https://krita.org/en/> ) or Figma or GIMP

In the past I used a lot of Adobe

TradingView has all the tools necessary for TA mockups as well
