Thread: [Development position for SaaS business](#)

Flaws. - October 15, 2025, 11:34 am

Evening people

I'm currently on the hunt for an ideally full stack developer at a SaaS business, I have 4 developers onboard currently but am looking to expand the team.

Our current setup looks roughly like this:

- Frontend: JavaScript (React-style components), HTML, CSS — nothing too wild, just clean and modular UI work.
- Backend: Go (Golang) — our core logic, APIs, and background services.
- Database: SQL-based (PostgreSQL or MySQL-ish).
- Infra: Modern hosting, Git for version control, APIs, and CI/CD pipelines. (Super simple)

If you're not a Go veteran but you're excited to learn it, that's totally fine, enthusiasm and clean habits will work just fine with us.

What am I looking for from you?

Solid grasp of frontend fundamentals, and good backend knowledge, if you are familiar with Kubernetes big bonus points.

- Able to build and debug REST APIs.
- Experience with modern JS frameworks (React, NextJS).
- Knows what "code quality" means — readable, consistent, tested, not spaghetti.
- Comfortable with Git, basic DevOps, and collaborative workflows.
- Bonus: some design sense wouldn't hurt but this really, really isn't needed, I won't ask you to pick brand colors (unless you want to suffer with me).

I'm looking for someone who isn't made of steel, but can actually communicate and occasionally touch grass (this part may be a long shot), and work well with our team and support. We love quickly iterating changes and constantly evolving our platform with an extremely large release right around the corner.

We don't have any set working hours at all, it's a very much you've got your work, make sure to keep pace get your bits done in your own time in a reasonable time frame and we'll never have any issues at all situation.

Payment reflects (very healthily) the work you'll be doing, can be paid out monthly in either crypto or preferably bank transfer.

This does involve contracts and an NDA, you will be labeled as a contractor.

Drop me a DM and let's get talking
