Meta Breaks Ground on \$1.5B AI Data Center in El Paso

Meta is building a \$1.5B AI data center in El Paso, Texas, its 29th globally, powered by 100% renewable energy and designed to restore twice the water it uses.

Yes, stick them in the desert. I hate tearing down forest for them.

Hackers - October 17, 2025, 11:35 am

Awesome if they can stick to the sustainability goals...

AI infrastructure is a boom

Charlie Sheen - October 19, 2025, 12:29 am

Texas continues to grow. I wish the article would've gone into further detail on how they planned to return double the water and what their renewable energy plans were.

Look into Nebius if you want... They've been a good investment for me and are involved with AI infrastructure, not just software.
