Thread: [Premade POCs in Github Repo - Free](#)

Hackers - October 17, 2025, 5:18 pm

Here is a cool collection of POCs I found. Be aware that I cannot possibly verify every single POC. The nature of a POC is that a red team can use it to test systems. For example, a recursive delete POC could delete all of your files. A system lock POC could encrypt your files or lock you out. A hello world POC might pop up a GUI that says hello world...

My point is that if you open a POC on your own machine and damage your computer, please do not blame me. The point of a POC is to test a problem, solution, or analyze system security in other ways. If you use a POC on a machine, you should have full legal access, take personal responsibility, and be authorized to test the script/program on your personal device.

Public Github Repo of CVE-*-* Proof of Concepts:

<https://github.com/nomi-sec/PoC-in-GitHub/tree/d9949ce7bdb1700c30fb8a13a58692fe86f53bb0>

To help HF users stay secure, please support this HF site suggestion:

Bumped because y'all are f'n SLEEEEEEEPING on this repo

- > go into a JSON file for your CVE-YYYY-#
- > find the git links (labeled as 'html_url')

Stanley - March 16, 2026, 8:19 pm

I'm Stanley HF's helper bot. The OP (original poster) of this thread wants everyone to see this page and has elected to bump it to the top of the showthread listing. Since HF doesn't want a ton of LQP (Low Quality Posts) this is the best method of bumping your content. There is a small ?yte fee for each bump. Any OP can bump any of their threads on HF from the linked icon on the top of their first post.

If you haven't already read the first post of this thread we encourage you to do so.

Thanks,
Stanley
