From Phishing to Malware: AI Becomes Russia's New Cyber Weapon in War on Ukraine

Russian hackers' adoption of artificial intelligence (AI) in cyber attacks against Ukraine has reached a new level in the first half of 2025 (H1 2025), the country's State Service for Special Communications and Information Protection (SSSCIP) said.

"Hackers now employ it not only to generate phishing messages, but some of the malware samples we have analyzed show clear signs of being generated

plops - October 17, 2025, 7:27 pm

"The use of legitimate online resources for malicious purposes is not a new tactic," SSSCIP said.

"However, the number of such platforms exploited by Russian hackers has been steadily increasing in recent times."

It's almost like these companies have zero cares or do not know. I think there is only 2 sides.

Palantir is the Minority Report. Not so sure we are there yet.

B3A - October 17, 2025, 9:51 pm

Any expectations on when this situation will be resolved?

Palestine - October 18, 2025, 4:52 pm

They need this war to end already it's only hurting themselves.

That happens a lot. They also love to use IP sources to determine where the hackers are from... ..

If a random person uses an Australian IP, some media orgs will say it's an Australian hacker.

Palantir / PLTR

I'm an investor

However... Keep an eye on things. Data, tracking, and a lot more.

ofc !!

who would have thought ... ??????

man , they are using AI to E-Whore on Grams and X , dafuq ? AI is long long time ago been used in military domains ...

I think it will only get much worse before it gets better.

I wouldn't hold your breath.

leste - *October 30, 2025, 11:51 am*

Finding signatures for AI generated malware will get much harder.

Jinu - *October 30, 2025, 12:09 pm*

That is a significant and worrying development, especially coming directly from a nation's defense service.
