From Detection to Patch: Fortra Reveals Full Timeline of CVE-2025-10035 Exploitation

Fortra on Thursday revealed the results of its investigation into CVE-2025-10035, a critical security flaw in GoAnywhere Managed File Transfer (MFT) that's assessed to have come under active exploitation since at least September 11, 2025.

The company said it began its investigation on September 11 following a "potential vulnerability" reported by a customer, uncovering "potentially suspicious

Glad to hear they're following up, I have heard a few things about this in the last couple of weeks

Vectura - October 20, 2025, 6:13 pm

Glad they dropped the full timeline. GoAnywhere's had a rough history with zero-days, so transparency helps. At least this time the patch came faster than the last round.

Remember 911 September 11 2001 ?

DAL-SHA - October 22, 2025, 1:32 pm

Good transparency from Fortra ?? , but this shows how slow patching can cost trust.

I half expected you to have a full POC

Hackers - October 30, 2025, 7:20 am

I'm sure it's not too hard to make one if you have access to a server w/ this, but a little tricky to

replicate without a demo server.

I didn't find any POCs easily, but this 1 user said he may release a POC for this in future:
github.com //orange0Mint //CVE-2025-10035_GoAnywhere

Here are some scanners to find vuln servers / check your own servers:

<https://github.com/rxerium//CVE-2025-10035>
<https://github.com/ThemeHackers//CVE-2025-10035>

Nothing illegal, they are just version # checkers^

heh no problem!

Ieste - October 30, 2025, 11:41 am

The investigation starting on Sept 11 and the exploit being active since then...
