Hey all ..

Have you ever heard or played Metin2 ?

Its an Open World MMORPG game that i grew up playing ..

It kinda has shitty graphics in my opinion and needs some work but its what i enjoy playing from time to time ..

Its on Gameforge.com clients ..

I suggest you try it if you into this genre of games ..

Yes , i play and now there is a exploit that only a few people know, and they kick other users out of the game. Its pretty annoying and im trying to find it.

I'm familiar with lots of old MMORPGs, but I don't believe this one rings a bell for me. It's very possible I've at least glanced over it somewhere before, but I definitely never even considered playing it and probably didn't give it much if any attention upon coming across it if I ever did. I'm glad to hear it's still available for you to play though given you expressing that it's what you enjoy to play. I'm definitely grateful that OSRS for example exists since that version of the game is what I played a ton and loved when I was growing up.
