Thread: [Bought the quantum dip](#)

Hackers - October 23, 2025, 12:26 pm

I bought the quantum dip for my favorite 4 - RGTI, IONQ, QUBT, QBTS

Overall I truly think we can see 10X+ on these, even at last week's prices.
I'm targeting higher, for my 10+ year bet for 100x+ returns.

However, I always do look for buying opportunities and the recent crashes were good chances to buy.

Hoping to see QBTS at \$30+ (I thought we'd see support at \$38+, and i was wrong)

Hoping to see RGTI at \$40+, IONQ at \$60+ , and QUBT at \$16+

i bought in at lower prices, but those are the prices currently and my dip buys are in the green (didn't really have much in the red except for some smaller DCA buys, proportionately)

I also then decided to double down at close yesterday and a little bit this morning.

I sold off a few green positions and moved a few thousand more into quantum markets.

I am going to buy more tomorrow (normal 2-week DCA buy) but I will spread tomorrow's amount across a few quantum-aligned industries rather than the main 4 stocks.

I am still diversified overall, but this specific account/portfolio is a lot less diverse now. For the next couple of months I'll keep buying into QBTS/RGTI/IONQ/QUBT, but I'll definitely be focusing on risk a bit more to account for my latest decisions.

Feels good, we could eat another big crash and I'll still be in green, but I do truly believe that we will see two to three of these four picks hit \$100+ prices within 2025/2026.

I have also made additional purchases yesterday for QBTS, but that was around \$32

Hopefully we'll see a strong week, next week - today will be telling...

ATH was \$46 not too long ago for QBTS, and I'm sure we'll retest soon enough regardless.

well that fucking worked, at least for the open today.

May the odds be forever in our favor.

11% up already today.

But the ticker is quite volatile, so just keeping a track!

Yeah, going strong!

Check out FEIM, MCHP, and ADTN too. These 3 work with smaller components like atomic clocks, and they end up taking manufacturing deals as a result of bigger companies ... FEIM is my favorite out of the 3.

Also if you haven't, make sure you diversify quantum with RGTI and IONQ.

QUBT has concerns but at \$16ish, it's not a bad idea to pick some up if you can.

QBTS is my favorite because of the annealing methods, and I got in early / first with D-wave before the others

Okay, just threw another \$1500 into quantum & quantum-aligned stocks as of today.

I am not saying it can't go down a bit more, but today is my normal DCA day so out of principle, I bought.

Stanley - October 27, 2025, 7:48 am

I'm Stanley HF's helper bot. The OP (original poster) of this thread wants everyone to see this page and has elected to bump it to the top of the showthread listing. Since HF doesn't want a ton of LQP (Low Quality Posts) this is the best method of bumping your content. There is a small ?yte fee for each bump. Any OP can bump any of their threads on HF from the linked icon on the top of their first post.

If you haven't already read the first post of this thread we encourage you to do so.

Thanks,
Stanley

This appears to have been a solid move with a good, convincing open this morning.

We'll see how the week goes, but I'd really like to see at least 20% gains to be within firing range of another attempt at ATH :)

The prices are normalizing over time as more investors join the party, but for now, they are still highly speculative & can swing up/down quickly. A 30% gain or crash in a day is not out of the picture for the quantum stocks.
