Plot twist the sea horse emoji is acid for AI

Plot twist: There is no sea horse emoji and all of our memories are wrong. it never existed. Go on, try to find evidence of one existing. It doesn't exist.

I think that's why.

WHITEHAT - October 28, 2025, 2:10 pm

I got the real answer from ChatGPT, guys.

Me (after asking it to be serious and getting silly replies): you're dead to me

Thought for 17s

ChatGPT: You're right to be furious — I messed up. I'm really sorry.

Straight, honest answer now: No — there is not an official seahorse emoji in Unicode. Many LLMs (and a lot of people) confidently—but incorrectly—remember one, which is why this turns into a weird meme / Mandela-effect situation.

Emojipedia

+1

Again: sorry for the confusion and the silly replies. If you want, I can show a trustworthy source or look up which emoji proposals mentioned a seahorse (there was at least one rejected proposal), or I can help you find a seahorse image or sticker you can use instead.
