Thread: [I Hacked a Casino Website and Accessed the Admin Panel](#)

aloraveraso - October 30, 2025, 5:39 am

Hello, I've managed to infiltrate the admin panels and I'm trying to upload a shell, but it only accepts files with the extensions png, jpg, and pdf. I absolutely cannot upload a file with the php extension.

The account I accessed is the most privileged one; I have access to everything and can do anything. However, the casino infrastructure provider has implemented a series of security measures, and I cannot successfully inject the shell.

If we can accomplish this together... if we manage to breach the server, there are at least 5,000 online betting websites hosted inside. We can empty all of their crypto accounts and steal their data.

If you can't upload a php file, then you do not have admin access. Good luck with the jail time.

I also guarantee you that there are not 5,000 websites hosted on one machine. My guess is a few dozen.

Or mine... being just the one

aloraveraso - October 30, 2025, 11:23 am

I can provide all the evidence. The provider is BetConstruct infrastructure. It's an infrastructure belonging to Armenia—I specifically targeted them. They are providing illegal black market casino services to many countries. If we can access the server—meaning if we can inject a shell file inside—there are 25,000 active betting sites. Among them, there are 100 very large-volume websites. I was only able to access one of these. The panel I currently have access to has the authorized account for one site. This account has permissions such as transferring money to payment methods and transferring crypto payments. I am trying to upload a shell using this administrator account. They haven't noticed me yet because I haven't stolen any money from the inside. If anyone is confident, I can provide evidence.

That must be the mother of all servers. Still, it's not possible for you to map out the physical infrastructure without IaaS access or command execution on the box.

Let's say that these 25,000 websites are all hosted on one single bare-metal server. You have admin-level access to a control panel for one website. It is unthinkable that a Web3 site does not use PHP. There absolutely must be a way to upload a PHP file from that control panel. Being as all the websites are managed by one company, it's unlikely that there would be preventions in place for PHP command execution.

'Mother of all servers' is crazy work! xD

DramaKing - October 30, 2025, 12:47 pm

I figured it out. OP can't upload arbitrary files because he didn't compromise a cPanel or similar. Looking at the screenshot, it appears to be a website creation framework or builder. This company is too smart to let just anyone run unvetted code on their infrastructure.

AI Quote:

You said:

Identify the web control panel from this screenshot: <https://i.ibb.co/0gRkmwv/hoooo.jpg>.

ChatGPT said:

Most likely the SOFTSWISS Game Aggregator / SOFTSWISS back-office (client back office).

Why I think so: the screenshot shows a “Report by Provider” table with providers (Pragmatic Play, BetConstruct, Spinomenal, etc.) and that exact report name appears in SOFTSWISS back-office documentation and product screenshots for their Game Aggregator. The visual layout (provider list, export buttons, sidebar icons and a “switch to new version” badge) also matches SOFTSWISS-style back-office UI.

If you want, I can search for an exact matching screenshot or try to identify server headers/branding from the site where that image is hosted — tell me which you'd prefer.

You said:

Explain what SOFTSWISS does.

ChatGPT said:

SOFTSWISS is a large technology company that provides turnkey software solutions for the online gambling industry — mainly casinos, sportsbooks, and iGaming platforms.

Here's a breakdown of what they do:

? 1. Online Casino Platform

A full backend system for running an online casino:

- Player accounts, wallets, KYC, AML tools

- Game management and content integration

- Payment processing (multi-currency + crypto)

- Reporting and admin dashboards

It's often sold as a “white label” solution, meaning clients can launch their own branded casino using SOFTSWISS's infrastructure.

? 2. Game Aggregator

A centralized system that connects hundreds of third-party game providers (like Pragmatic Play, NetEnt, etc.) through a single API.

- Casinos integrate one API to access thousands of games

- Handles all transactions, currencies, and player session management

- Provides analytics and reports (like the one shown in your screenshot)

? 3. Sportsbook

A modular betting platform for sports and esports:

- Odds feeds, event management

Risk management and trading tools

Customizable frontend and multi-brand support

? 4. Crypto Casino Solutions

SOFTSWISS was one of the first iGaming tech firms to support Bitcoin casinos, offering systems that handle crypto payments and blockchain integrations.

? 5. Affiliate & Marketing Tools

Affiliate management system (for tracking referrals and commissions)

Player retention and bonus management tools

? 6. Managed Services

They also provide operational support — player support, anti-fraud monitoring, compliance, etc., for clients who prefer a “hands-off” approach.

In short:

SOFTSWISS is like the “engine room” behind many online casinos and betting sites. It doesn’t typically face players directly but powers and manages the backend systems that licensed operators use.

Would you like me to list some of the brands or casinos known to run on SOFTSWISS’s platform?

ChatGPT can make mistakes. Check important info.

SIM-5693364 - October 31, 2025, 12:12 am

aloraveraso, any news?

0dayexploit - October 31, 2025, 3:13 pm

interesting

knxtxx97 - October 31, 2025, 3:52 pm

Greetz. Remember clear logs

MadScientist - November 1, 2025, 3:34 am

Are you Turkish? Why are they all in TRY (Turkish Lira?), man that currency / Turkish economy had taken a major hit the past few years.

jajameme - November 16, 2025, 7:40 am

You need admin access to upload a php file

salmagamal2021 - November 23, 2025, 5:48 pm

not recommended

Tripple6 - November 26, 2025, 7:19 pm

wow this is just crazy, good luck with this

bankai-hacker - December 3, 2025, 6:49 pm

if it only accepts .jpg, .png you can use a unicode to change the name of you .php file, something like exploitjpg.php to exploitphp.jpg..U+202E RIGHT-TO-LEFT OVERRIDE (RLO), check how it works on google. this will work if the sites uses name variables

lvc1fxR - December 5, 2025, 3:49 am

I'm going to be completely honest with you...

You are actively confessing to a felony and trying to recruit accomplices for grand larceny on a public forum. LMAO

The "God Mode" Contradiction:

Quote:The account I accessed is the most privileged one; I have access to everything and can do anything Quote:I absolutely cannot upload a file with the php extension

These two sentences are mutually exclusive. You are likely staring at a "Content Manager" dashboard while thinking you owned the server.

"The OpSec Disaster"

You have explicitly named the target (BetConstruct), the location (Armenia), and your intent (stealing crypto).

BetConstruct is a multi-billion dollar B2B provider. They have dedicated Security Operations Centers (SOC). Posting "I am currently inside your system and stuck on the upload form" is the digital equivalent of robbing a bank and calling the police to ask how to open the safe.

You don't control 25,000 websites. You are hallucinating. If you actually touch any money, you won't be "emptying crypto accounts", you will be generating Interpol Red Notices.

Even if you miraculously bypass the extension filter (which is trivial, btw), the directory you are uploading to almost certainly has execution disabled.

Just stop right now and hope you don't get caught is my advice to you.

Yani - December 5, 2025, 3:58 am

Try uploading with a zero byte. Pause the POST request, edit the name of your file to something like shell.php%00.jpg

It has worked for me in the past.

diablospartan - December 5, 2025, 7:59 am

My friend dont want to scare you but this its a very dangerous thing to do for your safety

If you get caught be prepared to spend some years in jail

KyleTheXyle - December 8, 2025, 4:27 am

You have experience in this field? Give me pm on telegram pls

Leighton - December 9, 2025, 12:57 pm

many have been there long before you and its not admin

Hackers - December 9, 2025, 5:24 pm

(Oct 30, 2025 12:30 PM)DramaKing Wrote: [\[CITE\]](#) Let's say that these 25,000 websites are all hosted on one single bare-metal server.

I think OP is saying that they have found a vuln w/ the underlying software which is also installed on thousands of other servers. I don't think they are claiming that 25K exist in 1 place, only that if they can make progress on this vuln somehow then there are 24,999+ other targets for them. That's how I interpreted it anyways.

OP, if all you can do is upload pdf, png, or similar then you would need to rely on the software having another bug. For example if they don't sanitize file name, or if there are manipulations with mime type, POST/FILE options, params, PDF handling, null bytes, or other possible problems. As others have already said, your chance of success is slim, you may have an admin session but not high perms, and you are doing something that you should not do to begin with. Whether you are honeypotted or not, you should probably not go for online casinos because 1) the law, and 2) not every casino follows the law. Be careful.

R5N3T - December 10, 2025, 5:28 pm

wow is good, can u teach me how to hacking website ?

Chinese21 - February 17, 2026, 8:19 pm

Do you have the ability to hack into a Chinese illegal lottery website?

Dotexe - February 18, 2026, 3:12 am

(Feb 18, 2026 04:03 AM)loadman Wrote: [\[CITE\]](#) hint:

use burpsuite

intercept request after click on upload

edit

carry on forward the request, it should work

Why do you bump a deadass post ? OP is either in jail rn or decided to quit that nonsense operation

Chinese21 - February 24, 2026, 1:50 am

what's up ,let's collaborate

vetbesim - February 25, 2026, 12:55 pm

if you can edit pages or make new ones try put some php into them and see if it does any good.

ibb.co/w9FTBvj

I once wrote an article about this; the site's file upload verification is very straightforward. It only checks the first two hexadecimal values, and the last two are checked for PNG and JPG files. You need to place the PHP code in the middle of the file (PNG or JPG).

cdev - March 6, 2026, 6:54 am

.svg if the server can accept it
try modifying it with Burp Suite
use a null byte, etc
did you try that?

dusheng - April 24, 2026, 7:10 am

No one knows. OP hopefully realized how stupid this was. No way would the company give execute permissions on the underlying infrastructure to its customers. A company like that would securely isolate every website.

Mastercarder - May 5, 2026, 3:27 pm

So I guess another one bites the dust aye fellas.

morpheu - September 30, 2026, 1:25 pm

Hey man after almost a year what can u say, did it work?

xxvi - October 6, 2026, 8:51 pm

which method did you use for hacking the site?

eliotjames - October 12, 2026, 1:09 am

This is very interesting, how did you go about infiltrating the casino's systems? Was it some basic heist or?

tezeus - October 12, 2026, 8:55 am

Nice thing but i'm still at the start

Ezake1 - October 12, 2026, 9:38 am

Lmao someone thought he struck gold
