Why Organizations Are Abandoning Static Secrets for Managed Identities

As machine identities explode across cloud environments, enterprises report dramatic productivity gains from eliminating static credentials. And only legacy systems remain the weak link.

For decades, organizations have relied on static secrets, such as API keys, passwords, and tokens, as unique identifiers for workloads. While this approach provides clear traceability, it creates what security

Makes total sense. Static secrets were never built for today's scale. Managed identities kill off a huge attack surface and save ops teams from key rotation headaches. It's the right direction for cloud security.
