Thread: [Qr whatsapp web pentesting](#)

descodificador - November 5, 2025, 5:12 pm

Hello everyone,

I'm conducting some tests related to the QR code login flow in WhatsApp Web and I need some recommendations. I'm looking for a tool, repository, or solution (preferably open source) that will allow me to send a QR code to my phone from WhatsApp Web and, in turn, test how another device syncs by scanning that QR code. The idea is to simulate and analyze the QR code authentication process for research/security purposes.

If anyone knows of any projects, libraries, test environments, or secure and authorized procedures for doing this, I would appreciate it if you could share them.??

You can just send it to your phone with your camera. I don't get why a 'tool' is needed.
