Chrome allert bypass + Smartscreen bypass + WD bypass

.exe file

Is it possible to do this with a cryptographer?
Without using EV certificate signing.

If any encryption service can do this,
please reply.

Chrome Safe Browsing relies on reputation. It should be nothing to bypass. Bypassing SmartScreen is done by using an exploit that avoids MotW. I know some methods for this and adding exclusions to WD.

As I understand it, Google Chrome's reputation is based on the number of downloads of this file? Perhaps it is necessary to artificially create special file downloads so that Google Chrome sees this and increases the file's reputation?

What file format will be used for the output?

simple answer to your Question is "NO"

now there are exploits available but 1 exploit can bypass only 1 thing. you need 3 things so Practically not possible all together.

Actually, it looks complicated (at least for me).

After all, you have to monitor the cleanliness of three indicators: for WD, Chrome, and SmartScreen?

Wouldn't it be better to issue the file via ClickFix in this case?

The hardest thing would be SmartScreen without EV cert and no file reputation. Chrome shouldn't

make a peep over an unknown file. All that's really needed here is a crypter or WD exclusion and a MotW exploit.
