Looking for a good Rat/Bot/Crypter/Binder Combo

Hello Fellows.

I'm generally satisfied with the options offered by even free Rats/Bots. However, a recommendation from the community would be important to me, especially regarding support and updates.

It's important to me that the crypter or binder reliably converts the .exe file into images. Of course, formats like PDF are also welcome.

Thanks for your help. And please excuse my poor English.

I also don't want to spend hundreds of dollars at the beginning. I was out of the scene for a few years and am just getting back into it. I just need something solid to practice with. It doesn't have to be free. I'm just saving the expensive tools until I can use them properly.

Thanks for your help. And please excuse my poor English.
Greetings from "Good old Germany" ;-)

Hello

What RAT do you have available.

convert exe to image is an exploit and not much people sharing it around. PDf too is an exploit but i know where you can get it cheap
