Is it possible to create a malware in .pdf file?

DeathPenalty666 - November 12, 2025, 3:09 pm

a malware and spread with a pdf exploit yes. but most of pdf exploit are specific to a pdf reader so... you must get a pdf reader checker script to drop the good pdf exploit to reach out successfully the target otherwise...

OpalCanidae - November 12, 2025, 3:12 pm

The long answer is complicated. DeathProphet explained it pretty well but I'll comment for another reason

I admit this is not really my forte, I have never looked into LNK exploits or anything of the sort - just know that most ANYONE reaching out to you claiming they have a working PDF/PNG etc exploit is 9/10 trying to scam you.

LNK will not be pdf it hit from a different way i mean SYSTEM detect it's a lnk you can put a zip icon or no icon it's still a lnk

to get successful hit rate you need good method you can't just spread this and add attachment and hope they will click it haha

Read up on PDF reader and especially browser patches since that's what people use and how software developers generally know about malware and try to prevent it.

I've made a thread about malicious PDF files, but not sure if all methods still work : <https://hackforums.net/showthread.php?tid=6284659>

That might not exactly fit what you're looking for too
