Google's AI 'Big Sleep' Finds 5 New Vulnerabilities in Apple's Safari WebKit

Google's artificial intelligence (AI)-powered cybersecurity agent called Big Sleep has been credited by Apple for discovering as many as five different security flaws in the WebKit component used in its Safari web browser that, if successfully exploited, could result in a browser crash or memory corruption.

The list of vulnerabilities is as follows -

CVE-2025-43429 - A buffer overflow
