Thread: [Cheap vpn for port forwarding?](#)

trump002 - November 13, 2025, 7:56 am

I am looking for vpn not costly with having port forwarding feature . i want to use for rats as i used shockvpn last year when it was cheap but now it has increase prices. kindly suggest if anyone have idea about any port forward vpn with prices upto 1usd/m or 2usd/month.

Following this curious other options out there with a stable port forwarded port, mine changes port with every IP change / reboot. Preferably multiple ports, mine only allows 1 randomly changing port.

Your budget is tiny, and ShockVPN costs as much today as it did a year ago.

I suggest buying a \$1/\$2 server with tun/tap enabled and setup openVPN client server and then enable port forwarding yourself. It be cheap, secure and you'll be able to delete the logs yourself.

And where do you expect to find such magically low prices.

as ShockVPN claims to be \$3 a month, i've never seen it lower for any other VPN, i guess a VPS would be the cheapest option

If you are going to go VPS route, make sure they offer encryption.

It's all well and good being able to delete your own logs, but if your box is unencrypted at the data center level you might be in for a world of fun.

Thanks Mr. Frosty for that valuable lesson

You can just buy a VPS with Tun/Tap enabled and that is all you need. Maximum resources you'll consume with a single PC using the VPN is 512MB/1Core@2Ghz that too at 1Gbps uses! ?? Good Luck!

VPS.AG / Interserver.net (My first when I started a VPN on my own) got it for \$0.01 PayPal / month and back then you can just register PayPal from New Zealand and buy a \$1 VCC from NZ and activate PayPal Premier account without much effort, send \$0.10 and pay \$0.01 and walla you get a \$0.01 VPS for a month, plus you get 10 days extension to pay as well so its a 40 Days VPS for 1 Cent, suspended, copy the server files and get a new VPS again, this method doesn't work anymore for me as I don't have ways to make unlimited PayPal account from which I can pay 1 Cent, but there is another way using card and you can use any prepaid card over interserver and get this done, just that VCC at cheapest come for \$1.25 (Pre-Paid) which has around \$1 in balance so the VPS price will be \$1.25 ??

Agreed with the OP, you can just Google some out, alongside, you can also get Google \$300 credit for the same purpose and deploy VPS for 3 months and same for linode promotion of \$100 ? plus linode itself sells servers for \$5 as well.

We can always encrypt our VPS with a close OS encryption instead of hardware encryption (paying

much) and set a bash script to auto-delete set certain folder (set logs) of logs so the logs are also auto-deleted at say 10 mins interval.?
