Thread: [Seeking Technical Co-Founders & Security Talent](#)

???????????? - November 17, 2025, 9:23 am

(Nov 17, 2025 09:09 AM)57707003 Wrote: [\[CITE\]](#) I'm building an Attack Surface Management (ASM) SaaS platform that helps organizations continuously discover and assess security vulnerabilities across their web applications and infrastructure through automated scanning.

What I'm Looking For:

Co-Founder(s):

- Strong experience in security tooling, vulnerability scanning, or network security
- Backend/systems programming skills (Go, Rust, Python, or similar)
- Understanding of web application security and common vulnerabilities
- Entrepreneurial mindset and commitment to building from ground up
- Interest in equity stake and long-term partnership

Security Talent:

- Experienced penetration testers and security researchers
- Deep knowledge of OWASP Top 10, CVEs, and vulnerability assessment
- Interest in both improving our scanning engine and providing premium pentesting services
- Strong documentation and reporting skills for customer deliverables

The Product:

Our core offering is a deployable binary that organizations run to continuously scan their attack surface - web apps, APIs, cloud infrastructure, and other digital assets. The tool identifies vulnerabilities, misconfigurations, and exposures automatically.

For customers who need deeper analysis, we offer professional pentesting services as an upsell - combining automated scanning with expert human review.

Why This Opportunity:

Most ASM tools are either too expensive, too complex, or don't provide actionable results. We're building something lightweight, powerful, and developer-friendly that teams actually want to use.

Currently have early prototype. Ready to accelerate with the right technical partners.

What's Next:

If this resonates with you, let's talk. Keeping specifics confidential for now, but happy to dive deeper after an initial conversation.

matrix: @tikket:matrix.org

discord: .tikket

I am up for this if project is genuine and not just talks.
