Making Tech Human: How to Stay Curious in a Digital World

Technology doesn't have to be overwhelming. By approaching tools with curiosity, humanizing digital experiences, and using storytelling, we can turn tech into a source of creativity, learning, and empowerment.

We are definitely coming to a day and age in this lifetime for each and every one of us where this is crucial to understand, particularly because of AI. A lot of people do not realize the actual semantical nature of NLP and how it correlates to this article. I urge people to really try to focus on the part where it speaks of humanizing the digital experience then reflect on ways in which this is being disrupted (but also improved upon) in various facets of life.

Use less internet and social media. Seriously.

Get bored. That's how you stay curious. Overstimulation is bad for you and you will learn less. It's an illusion that you will learn more by 24/7 being on the internet.

Buy and read books instead.
