Welcome! Boost your trust score early through HF Contracts. Anyone who refuses to use the system isn't allowed to continue a deal.

Can you please give more info? Does it support proxies? From what i see workers are performing multiple tasks so realistically what would be the maximum speed it can reach per second.

To clarify, the tool is designed to run on a VPS and is managed through a web-based control panel. At the moment, proxy support is not included — all workers operate using the VPS's native network connection.

Yes, that's fine. I use HF Contracts and I'm comfortable proceeding through the system to ensure trust for both sides.
