Thread: [Online JS Obfuscator, made in 1 minute with Lovable + Demo site & Source code](#)

Hackers - November 21, 2025, 12:44 pm

Le prompt:

Quote:create a web page that can take a JS script and then obfuscate it using frontend-only tooling to avoid needing any backend infrastructure for a one page site that is html/css/js only and it is able to take any JS script and then give them final copy, for data privacy & licensing reasons.

Le response:

Quote:I'll create a sleek, developer-focused JS obfuscator tool with a dark, code-editor aesthetic....
> followed by exact steps to plan the build

For data privacy & licensing purposes only. If you use this, it must only be for 100% whitehat use cases. If you use this tool for anything else, I will comply with anyone who asks ~ suck it if you're mad & obey my TOS.

Live site / tool (may disappear in future):

Spoiler [\(Click to View\)](#)

<https://nodesjsprivacy.lovable.app>

I made this in roughly 60 seconds from prompt-to-completion

Source code:

<https://github.com/LNodesL/JavaScript-Web-Obfuscator>

Check out my other Lovable prompt examples... I made these other 3 and only spent a few minutes on each. It took longer to write the HF threads tbh:
