Thread: [H4LL0W_H0R53 - Image data packager & unpacker - Prompt & Preview URL & Source incl.](#)

Hackers - November 21, 2025, 1:40 pm

Here is an example Lovable prompt to build out a full frontend-only tool, such as for an image packer/unpacker for hidden data.

Casual prompt:

Quote:create a web page that can take an image and handle as blob (no actual file save on server) using frontend-only tooling to avoid needing any backend infrastructure for a one page site that is html/css/js only and it is able to produce a final image. However there are 2 modes "Pack" and "Unpack". The pack can take any custom data from textarea to package into the image file, while still maintaining the ability to be a real image, and the Unpack is able to extract this from an image we packed previously. Make sure the user can upload & save the image file (packed) without backend server, and when they unpack, we can display the unpacked text on screen. Please call it H4LL0W_H0R53 as the brand name (reference to trojan horse) with horse silhouette logo icon

Response:

Quote:I'll create a sleek steganography tool with a cyberpunk/hacker aesthetic - perfect for the trojan horse theme!

... continued build plans ...

BTW, I used an image of the JS Obfuscator panel I prompted for today, which is why you're seeing that as the uploaded/packaged image:

Check out my other Lovable prompt examples... I made these, spending only a few minutes on each.

It took longer to write the threads for HF than it took me to make the websites 100% 100% 100% !
