Convoa Broadcaster v1.0.0

[attachment=2292]

Get Your Copy for \$12 (BTC/XMR/etc) or 2500 HF Bytes

[contract=tid]Start Contract[/contract]

~ Your Telegram Message Cloner ~

Enable or Disable Per Chat / Group / Channel / Thread

Receive Messages (Private or Public)
Relay/Forward Messages to Any # or Type of Chats

Forwarded Media Attachments / Images

Perfect For Multi-Group/Channel Owners

Perfect for Sellers w/ High # of Customers
I recommend running private chat relays separately from any public relay bot.

.env:

Code RELAY_PRIVATE_MESSAGES=true

[h1]Default: false[/h1]

[h1]Set to true if you want all private msgs to the bot to be relayed to receiver chat(s)[/h1]

SIMPLE & EASY

- Add bot to any chat, or start new PM

- Enable Send/Receive settings
- It works!

Code /enablesend # Lets messages from this chat send through the broadcaster
/enablereceive # Messages from other chats will be relayed to this chat
/disablesend # Turn off relaying *from* this chat
/disablereceive # Turn off relaying *to* this chat
Only the master admin (TG user ID) can use enable or disable commands, per chat/group/channel/thread with the bot.

DEV NOTES

- > data/chats.json stores chat send/receive settings
- > The bot auto-discovers new chats in runtime, no re-start needed. Simply use the commands from your admin TG account.
- > Built in rate limiting to prevent abuse.
- > Uses Node.js with simple dependencies
- > cd projectfolder && npm install && npm start

Spoiler ([Click to View](#))

Code {

```
"name": "telegram-convoa-broadcaster",
"version": "1.0.0",
"description": "Telegram bot that discovers chats and broadcasts messages between them with
basic rate limiting.",
"main": "src/index.js",
"scripts": {
  "start": "node src/index.js",
  "dev": "NODE_ENV=development node src/index.js"
},
"engines": {
  "node": ">=18.0.0"
},
