Dude, that has nothing to do with Pulsar. ? VS Code just executes cmd.exe when restoring nuget packages. In fact, a Command Prompt popping up is an indicator of a perfectly safe console application. If it was hidden, then Microsoft might be trying to hack you (kidding, I think that conhost.exe or something is a child process that normally runs).

MadScientist - December 1, 2025, 1:57 pm

It's open source, you could go through the code and compile yourself?

scimitar - December 2, 2025, 1:56 pm

Pulsar is open source, just check it if you are worried :p

I don't think you will find any "cheap" RAT nowadays. Since seroxen is discontinued the market crashed in my opinion.

HALx86 - December 8, 2025, 11:01 pm

Have you tried something like Sliver? Pupy is still ok but it has been discontinued for awhile.

These people will do anything but learn, they much rather have some AI slop than actual engineering.

So Sliver and all other well adopted frameworks like mythic or havoc is far away from these kind of skids.
