How Falcon Finance's \$2B Platform Just Added Its First Non-Dollar Sovereign Asset

Falcon Finance integrated tokenized Mexican government bills (CETES) as collateral for its USDf stablecoin, marking the first non-US sovereign asset in its \$2B+ system. The move diversifies beyond US Treasuries through Etherfuse's Solana-based tokenization, targeting Mexico's \$65B remittance market while introducing emerging market currency and political risk. Whether users value geographic diversification over US credit reliability remains untested.
