Thread: [HFX Mobile: Run the HF Browser Extension on your iPhone!](#)

xadamxk - December 5, 2025, 6:03 pm

HFX Mobile

About

Many users primarily browse HF from their mobile devices and the mobile experience isn't as smooth as accessing the site via desktop.

I created HFX Mobile in an attempt to improve your HF mobile browsing experience, along with porting features from the [desktop browser extension, HFX](#).

Check out how to install this script to your phone along with current features below.

Please post if you are interested, plan to install, or enjoy the extension!

How to Install

Download and install the app "[Stay for Safari](#)"

Enable the extension in Safari by navigating to "Settings > Apps > Safari > General > Extensions > Stay". Enable "Allow Extension".

Install this extension by opening the following link in Safari and tap "Install":

Code

<https://github.com/xadamxk/HF-Userscripts/raw/refs/heads/master/HFX%20Mobile/HFX%20Mobile.user.js>[Click here if you are on your phone](#)

Activate the "HFX Mobile" script so it will be enabled the next time you visit HF in Safari

That's it - open up HF and enjoy!

FeaturesFavorites: Add any HF page shortcut to your HF header with 1 click

Example ([Click to View](#))

Compact Postbits: Compacts a user's profile assets, statistics, and awards on posts, making it easier to browse threads.

Example ([Click to View](#))

Mobile Thread Lists: Redesigns thread lists on UserCP, Forums, and Search to be mobile friendly.

Example ([Click to View](#))

Convo Timestamps: Adds timestamps to convo messages.

Example [\(Click to View\)](#)

Interactive Post Stats: Makes all of the statistics on a user's posts clickable.

Example [\(Click to View\)](#)

Give Popularity from Posts: Adds a button to user's popularity stats to give them popularity with 1 click.

Example [\(Click to View\)](#)

Ban Reasons on Profiles: Adds the reason users were banned to their profiles.

Example [\(Click to View\)](#)

Expand Profile Sections: Automatically expands profile sections and makes profiles views & awards easier to read.

Example [\(Click to View\)](#)

Posts on Thread: Adds a button to posts to view all of that user's posts on the current thread.

Example [\(Click to View\)](#)

Search Your Threads: Search for your threads in a forum with 1 click.

Example [\(Click to View\)](#)

Thread Mentions: Mention a user in the thread Quick Reply with 1 click.

Example [\(Click to View\)](#)

Group Management: Add, Remove, and Blacklist users from groups you lead directly from their profile. To activate, navigate to [showgroups.php](#) and click the "HFX: Update Managed Groups" button.

Example [\(Click to View\)](#)

Quick Unsubscribe: Unsubscribe from threads with 1 click.

Example [\(Click to View\)](#)

Please do and let me know if you run into any bugs.

Things get wonky on mobile.

6 - December 10, 2025, 8:47 pm

I reached out to [xadamxk](#) about the mobile version because the desktop version was the only one out there. He was so generous to make it for me! Even though the first versions had some bugs, I put in a lot of effort testing them while he worked on fixing everything. That's how HFX Mobile came to be.

I really enjoy using it on my phone because I always use HF on my phone. HF was incomplete without it.

xadamxk - December 15, 2025, 8:23 pm

[jcole](#) you're a mobile user, check this out.

I've been using it on my non-jailbroken iphone for a few weeks now.

CL1B - December 16, 2025, 10:14 am

That's so fucking nice.

I think this is useful and will be used by many, nice work

Eli Beigel - January 3, 2026, 5:51 am

Seems like a nice idea

Monero-chan - January 12, 2026, 9:02 pm

Works great on iPhone, but for iPad its a different story. The User info on posts is misaligned, see the image below.

On iPad, you can change for websites to use the desktop version instead of the mobile version, which i've set, So if I was running the desktop version of HFX It would proably look fine.

Another thing I noticed is that if you use HF by adding it as a web app to your home screen, the extension doesn't work, only if you're using Safari. I'm guessing extensions don't run at all on web apps, just the Safari app itself.

I use HF on desktop anyway but I wanted to see how the mobile version looked.

I use HF on desktop anyway but I wanted to see how the mobile version looked. Those mobile features are intended for mobile resolutions so I'm not surprised it doesn't format correctly on a bigger iPad (desktop version).

I'm not familiar with how the userscript manager works, but it sounds like your guess is correct. I'm guessing it doesn't get loaded in that scenario.

Thanks for giving it a test though!

Stanley - February 5, 2026, 12:36 pm

I'm Stanley HF's helper bot. The OP (original poster) of this thread wants everyone to see this page and has elected to bump it to the top of the showthread listing. Since HF doesn't want a ton of LQP (Low Quality Posts) this is the best method of bumping your content. There is a small ?yte fee for each bump. Any OP can bump any of their threads on HF from the linked icon on the top of their first post.

If you haven't already read the first post of this thread we encourage you to do so.

Thanks,
Stanley

Cosa Nostra - February 5, 2026, 1:51 pm

Alright, second thread and the second feature from you that is damn interesting.

The experience is sooo damn smooth. I often browse Hackforums on my iPhone and it's honestly not that great, but this extension makes navigation and posting super comfortable.
