Was just lurking around and stumbled across a wonky/glitchy css div/area on the stats page when viewing bytes.

I have pasted a link to the image, the very first column has a specific width set on those div's which is 68px?

You can see the top half I've set those to have 50% space on the left/right, which cleaned it up nicely.. then if you look at the bottom half, those are how the 68px ones look (Currently) So basically its a before/after example if you care to fix it!

Not very critical, just a good bit cleaner.. :) Not bugging, just trying to help maintain the high quality vibe here at HF.. <3

Nice thing to notice, I see the overflow is real, I figured screen size but does it still on 2K.

Meh, long usernames inside fixed width boxes.

I made a minor adjustment to improve it for now.

What matters is that the statistics are accurate in the first place... but I agree with you on everything.
