Thread: [Misericorde Stealer\(C++ stub\) - USER-HOST PANEL / v10&v20 decrypt / FOR ALL 79\\$+](#)

1367283233 - December 16, 2025, 7:23 pm

Misericorde Panel is our main advantage - security and privacy, the panel is installed ENTIRELY on your servers, we do not check, do not record, do not monitor you or your bots. All data from the client goes directly to your servers where the panel is installed.

The client collects data from all Chromium and Gecko browsers.

Collect more than 125 crypto wallets (extensions and desktop), as well as more than 10 authenticators - you can add new ones or delete unnecessary wallets or extensions yourself through the built-in config.

Decryption of all data is performed by a panel ON YOUR server.

No UAC rights or browser closures are required for the data collection!

CLIENT STUB

- The client build is written in pure C++ (WinAPI) without dependencies, the build weight is 350KB~
- A hybrid browser profile search is used in the system, ALL profiles and ALL browsers are collected.
- Optimized filegrabber - does not collect empty garbage and does not overload the log.
- An AntiVM module that will not allow your build to run on virtual machines/sandboxes
- Antidebug module, to prevent the analysis of your files.
- The client communication with the panel is encrypted with HTTPS + AES-256-GCM.
- !!!AntiCIS!!! - Our build will NOT run on devices from the CIS countries (Ukraine, Turkmenistan inclusive), checking by IP, layout, system language ~additional information about this module is described below~

PANEL

THE PANEL IS INSTALLED ENTIRELY ON YOUR SERVERS, we do not have access to it, as well as to your logs, you can do any checks yourself after purchasing a license.

The user-friendly, minimalistic GUI panel is very easy to install - you run and use it.

~For installation, you will need a server with a MINIMUM configuration -

3CPU 6RAM for optimal performance.

OC - Win10/11, or Windows Server.~

Panel displays detailed information about your logs and incoming connections.

Accepts requests from the client through the CHUNKED system, even if the user's device is overloaded during the launch of the client build, almost all data from the device will be successfully received.

Supports TelegramAPI - you can include notifications about new logs in your telegram channel, and even send logs in their entirety to telegram.

The BuildTag system, which allows you to find out which build your log came from, is assigned in the builder.

The AntiDuplicate setting allows you to receive only unique logs without repetitions.

As mentioned earlier, the client has an ANTICIS module that does not allow CIS devices to access your dashboard, BUT we also use additional checks and restrictions on the server - after decrypting the data, the server checks your data and deletes requests with passwords and cookies from CIS sites like -

avito

gosuslugi

...

etc.

. in addition, domains are subject to restrictions ".gov" - their data will also be deleted if they are in the final archive.

Showcase of panel:

"Stats tab" [\(Click to View\)](#)

"Logs tab" [\(Click to View\)](#)

"Builder" [\(Click to View\)](#)

"Settings" [\(Click to View\)](#)

"Log Preview" ([Click to View](#))

FAQ -

- We are against working on the CIS and government agencies, any requests to unblock these requests will be ignored.
- The detectors are cleaned every time the panel is updated, right now it is 1/36, the file is completely invisible to WD win10/11.
- We do not store data about our customers, your identification as a buyer is carried out ONLY with a license key.
- We will never offer you any promotions or purchase offers in private messages, revoke your licenses OR extort / ask for money - ALWAYS CHECK THE RELEVANCE OF THE CONTACT THROUGH THE FORUM!!!
- We are ready to make any transactions through the guarantors at YOUR expense.

Plans for upcoming updates: -

1. Flexible configuration of the Filegrabber module via the panel configuration.
2. An API system for creating builds and getting new logs through the API for your projects.
3. CLIPPER module
4. Wallets Brute
5. Google Token Restore
6. PERSONAL SELF-HOSTED shim servers.

~ you can send any suggestions to the support service.

License prices: -

- 1 Week - \$ 79
- 1 Month - \$ 179
- 3 Months - \$ 499
- 6 Months - \$ 929

WE DO NOT PROVIDE VOUCH COPY.

All the functionality of the panel and the build is included in each of their tariffs, you do not need to pay extra for any functions!

3000\$ deposit on exploit
we ready do any deals with escrow
we also have a 1 week tariff for test

1367283233 - December 22, 2025, 1:33 am

Version 1.0.1 has just been released.

The list of changes:

- Added the possibility of flexible configuration for Filegrabber, the ability to specify your own unique paths, depth, file extensions, minimum and maximum file weights.

- Google Token Refresh has been added, now you can restore Google Tokens and update gmail cookies directly on the dashboard, there is support for SOCKS5 proxy(DEBUG tab has been moved to the settings section)

- Sorter functionality has been added to LOGS tab, now you can sort the queries you need without leaving the panel - The ability to sort Cookies by domain, passwords by domain, collect Telegram tdata, Google Tokens, Steam Tokens, Wallets(including passwords from the log)/

- New buttons have been added for interacting with logs, now you can open the log of interest directly from the panel, or delete it.

- Now the panel supports the API, you can integrate the panel into your projects.

With our API, you can get global panel statistics, get information about the latest logs, download logs, generate a client file.

~API documentation is attached with the panel~

1367283233 - December 27, 2025, 1:36 am

Version 1.0.2 has just been released.

The list of changes:

Panel changes -

- Added the function to sort Discord tokens via SORTER in logs tab

- Added the function to connect your local API server for telegram (Allows panels to send archives weighing more than 50MB directly to your channel)

- Added a feature for customizing telegram notifications, now you can customize your notification when sending it to your channel.

Client changes -

- Fixed discord tokens grab

- Fixed IP address parsing, added additional IP api services to get a valid IP address (0.0.0.0 archives should no longer be available)

- Fixed errors that occur when the client is crypted, now the client configuration will not be lost when file is crypted. If you still have any problems with the file crypt, please let us know what exactly is going wrong.

dank843899 - January 9, 2026, 1:37 pm

bro do you have any video of panel?

Scoobeedoo - January 11, 2026, 12:53 am

hey, anyone use this yet?

Scoobeedoo - January 12, 2026, 6:14 pm

ok paid.
lets finish the contract bruv.

Is it nice to chat with yourself ?

We can clearly see its u from "Trust Scan".

casperr - January 13, 2026, 1:42 am

Your profile doesn't seem appealing no one will buy it or download it.

can you tell us more about what trust scan is?
as i said earlier, please contact me via PM if you have any questions, and dont litter the thread

Scoobeedoo - January 13, 2026, 2:40 pm

hey why the -12 .
I've made other purchases on this site.

1367283233 - January 14, 2026, 12:28 am

Hotfix has just been released.

The list of changes:

Client changes -

- Updated decryption method for chromium browsers

Scoobeedoo - January 14, 2026, 3:31 am

hey my license key doesnt work
please reply to dm ffs

Im sorry bro but youre fucking hopeless.

You take forever to respond .
My license key does not work.
And your reply is just to put it in again.?

Get absolutely fucked.
Please send my.btc back.

kushzh4x - February 23, 2026, 9:15 am

Its fake ?

Stanley - March 16, 2026, 4:17 pm

I'm Stanley HF's helper bot. The OP (original poster) of this thread wants everyone to see this page and has elected to bump it to the top of the showthread listing. Since HF doesn't want a ton of LQP (Low Quality Posts) this is the best method of bumping your content. There is a small ?yte fee for each bump. Any OP can bump any of their threads on HF from the linked icon on the top of their first post.

If you haven't already read the first post of this thread we encourage you to do so.

Thanks,
Stanley
