Thread: [This method to earn at least \\$500 a day](#)

mohamad123d7 - December 20, 2025, 10:48 am

The method involves buying and selling Telegram accounts in the form of OTP, session, JSON, and Tdata.

However, the best way to buy and sell is via session+json. I will explain the difference to you.

OTP: This is how accounts are bought and sold by sending a number, and then a code is sent, and so on.

session+json: This involves sending Telegram accounts as files, and it's the best and most convenient way to buy and sell.

I will present this method to you for free, even though many people use it. However, there are hidden aspects, bots you can sell to, and large business people.

for example:

I bought 1000

Telegram accounts + 1 US account for \$0.30.

You will sell them to bots for \$0.40 or to businesses for \$0.55. You will earn between \$100 and \$200 from this sale in minutes with no effort. You simply buy the account session files and sell them within minutes, and you will have profited. This is the basic method. The more innovative method involves bots and other methods. I have explained the matter briefly. If anyone has any questions or wants to find suppliers or people to sell to, I will help them for free.

These are some of my profits from selling Telegram accounts in bulk.
